NUTRITION GUIDE

Fuel Like A Baddie

The complete high-protein nutrition system for women who train.

Danielle Dawson

17 CHAPTERS · 12 RECIPES · 7-DAY PLAN

How to use this book

This book is the companion to your interactive app. The app is the fastest way to train: it logs every set, remembers your weights, runs your rest timer and charts your progress. This PDF gives you the same material in a format you can read, print and fill in.

Open the interactive app:
https://ka3lql3ak-collab.github.io/DigiByDK-shop/getfitwithme/fuel-like-a-baddie-f2q6.html
Tip: on your phone, tap Share → *Add to Home Screen* so it opens like an app.

This PDF is interactive. Tap any entry in the table of contents to jump to it, use your PDF reader's bookmarks panel to navigate, and fill in the workbook pages at the back directly in Adobe Acrobat, Apple Books/Preview, or most PDF apps. Your entries save with the file.

This program is for educational purposes and is not medical advice. Consult your doctor before starting a new exercise or nutrition plan, especially if you are pregnant, injured or have a medical condition. Stop any exercise that causes pain.

PART III

PART I

The Guide

17 chapters. Read Chapters 1–4 before you start, and use the rest as a reference.

CHAPTER 1

Welcome: Why Nutrition Changes Everything

You can train perfectly and still not see results if your nutrition isn't aligned with your goal. Food decides whether you build muscle, lose fat or stay exactly where you are.

This guide replaces guessing with a system:

1. **Calculate** your personal calories and macros (the Macro Calculator tab).
2. **Learn** the few principles that actually matter (this guide).
3. **Follow** the 7-day high-protein meal plan and recipes, or build your own meals with the plate method.
4. **Shop** with the grocery checklist and **prep** once a week.
5. **Adjust** every 2 weeks based on your progress.

> **My promise:** No starving. No cutting out entire food groups. No detox teas. Just real food, enough protein and a plan you can follow on a busy week.

CHAPTER 2

Energy Balance: The Foundation

Your body weight is ultimately driven by **energy balance**: the calories you eat compared with the calories you burn.

SITUATION	WHAT HAPPENS
Eat **less** than you burn (deficit)	You lose weight
Eat about **the same** (maintenance)	Your weight stays stable
Eat **more** than you burn (surplus)	You gain weight

What makes up the calories you burn (TDEE)

COMPONENT	SHARE OF DAILY BURN	WHAT IT IS
BMR (basal metabolic rate)	~60–70%	Keeping you alive at rest
NEAT (non-exercise activity)	~15–30%	Steps, chores, fidgeting, standing
Exercise	~5–10%	Your workouts
TEF (thermic effect of food)	~10%	Digesting food (protein burns the most)

> **The surprise:** Your daily steps often burn more than your workouts. This is why I make you hit your steps.

Why weight and fat aren't the same thing

Whether the weight you lose or gain is **fat or muscle** depends on your **protein intake** and **strength training**. Eating enough protein and lifting while you're in a deficit is how you lose fat and keep your shape.

CHECK YOUR UNDERSTANDING

What usually burns more calories per day for most people: workouts or daily steps and movement (NEAT)?

A. Workouts, always

B. Daily movement (NEAT)

C. Neither burns calories

Answer: B. NEAT (steps, chores, standing) often accounts for 15–30% of daily burn, more than a typical workout.

CHAPTER 3

Macros Explained

Calories come from three macronutrients:

MACRO	CALORIES PER GRAM	MAIN JOB	DAILY TARGET
Protein	4	Builds and repairs muscle, keeps you full	0.7–1.0 g per lb of goal weight
Carbohydrates	4	Fuel for training, brain and mood	The rest of your calories
Fat	9	Hormones, vitamin absorption, flavor	~25–30% of calories (min ~0.3 g/lb)

Protein: your #1 priority

Protein is the most important macro for women who train:

- It provides the building blocks for muscle.
- It's the most filling macro, which makes a deficit easier.
- It has the highest thermic effect (about 20–30% of its calories are burned during digestion).

Carbs aren't the enemy

Carbs fuel hard training and recovery. Women who cut carbs too low often feel flat in the gym, crave sweets and lose strength. Prioritize whole-food carbs (rice, potatoes, oats, fruit, beans, whole grains) and time them around your workouts.

Fat: don't go too low

Dietary fat supports hormone production, including those that regulate your menstrual cycle. Don't let fat drop below about 0.3 g per lb of body weight for long periods.

CHECK YOUR UNDERSTANDING

How many calories are in one gram of fat?

A. 4

B. 7

C. 9

Answer: C. Fat has 9 calories per gram. Protein and carbs have 4, and alcohol has 7.

CHAPTER 4

Using Your Macro Calculator

The **My Macros** tab uses the **Mifflin-St Jeor equation**, one of the most accurate formulas for estimating calorie needs, combined with an activity multiplier.

Choosing your activity level

OPTION	CHOOSE THIS IF...
Lift 2–3×/week	Mostly sitting during the day, under ~7,000 steps
Lift 4–5×/week	7,000–10,000 steps, lifting regularly
Daily training / active job	On your feet all day or 12,000+ steps

Choosing your goal

- **Lose fat:** −400 kcal from maintenance. Expect about 0.5–1 lb per week.
- **Maintain & tone (recomp):** best for newer lifters and anyone who wants to build shape without the scale moving much.
- **Build muscle:** +250 kcal. Slow, lean gains.

The 2-week adjustment rule

Your calculator numbers are a **starting point**, not a final answer. Everyone's metabolism is slightly different.

1. Follow your numbers consistently for 2 weeks.
2. Weigh yourself 3–7 mornings per week (after the bathroom, before eating) and compare **weekly averages**.
3. Adjust:

GOAL	IF YOUR WEEKLY AVERAGE...	THEN
Lose fat	Hasn't dropped in 2 weeks	Reduce by 100–150 kcal (from carbs or fat) or add 2,000 daily steps
Lose fat	Is dropping more than 1% of body weight/week	Add 100–150 kcal
Build	Hasn't moved up in 2–3 weeks	Add 100–150 kcal
Build	Is rising more than 0.5 lb/week	Reduce by 100 kcal

CHECK YOUR UNDERSTANDING

You're trying to lose fat and your weekly average weight hasn't moved in 2 weeks. What's the first adjustment?

A. Cut calories in half

B. Reduce by 100–150 kcal or add ~2,000 daily steps

C. Stop eating carbs completely

Answer: B. Small adjustments keep the process sustainable. Big cuts backfire through hunger, fatigue and muscle loss.

CHAPTER 5

Protein: Your Cheat Sheet

Hitting your protein target is the habit that changes everything. Here's what 25–40 g looks like:

FOOD	SERVING	PROTEIN	CALORIES (APPROX.)
Chicken breast (cooked)	4 oz	35 g	185
93% lean ground turkey (cooked)	4 oz	30 g	220
Salmon (cooked)	4 oz	28 g	235
Shrimp (cooked)	4 oz	27 g	120
Lean ground beef 93% (cooked)	4 oz	30 g	230
Eggs	3 large	18 g	215
Liquid egg whites	1 cup	26 g	125
Nonfat Greek yogurt	1 cup (227 g)	23 g	130
Low-fat cottage cheese	1 cup	26 g	180
Tuna (packet/can)	1 can (5 oz)	25 g	120
Whey protein	1 scoop	20–25 g	110–130
Tofu (firm)	½ block (7 oz)	20 g	180
Black beans	1 cup	15 g	225
Beef jerky	1 oz	10–12 g	80

> Values vary by brand. Always check the label.

Easy protein habits

- **Build every meal around protein first**, then add carbs, veggies and fat.
- **Breakfast is the biggest gap.** Most women eat under 15 g at breakfast. Aim for 30 g+.
- **Keep emergency protein** in your bag and car: jerky, protein bars, shakes.
- **Double up:** egg whites in your eggs, Greek yogurt in your sauces, protein in your oats.

CHECK YOUR UNDERSTANDING

Which meal is the most common protein gap for women?

A. Breakfast

B. Dinner

C. Post-workout

Answer: A. Most women eat under 15 g of protein at breakfast. Aim for 30 g+.

CHAPTER 6

The Plate Method (No Tracking Required)

Not everyone wants to log every bite. The plate method gets you about 80% of the results with no apps.

Build your plate with your hand

COMPONENT	PORTION PER MEAL (WOMEN)	EXAMPLES
Protein	1–2 palms	Chicken, fish, lean beef, eggs, Greek yogurt, tofu
Carbs	1–2 cupped hands	Rice, potatoes, oats, pasta, fruit, beans
Veggies	1–2 fists	Broccoli, salad, peppers, green beans
Fats	1 thumb	Oil, butter, avocado, cheese, nuts

Adjust for your goal

- **Fat loss:** 1 cupped hand of carbs at most meals, 2 palms of protein, extra veggies.
- **Build:** 2 cupped hands of carbs, especially around training.
- **Training days:** more carbs at the meals before and after your workout.

CHAPTER 7

Meal Timing & Workout Nutrition

Total daily intake matters most. Timing is the next level.

Before training (1–3 hours)

A meal with **protein + carbs**, moderate fat and lower fiber.

- Chicken + rice + a little veggies
- Greek yogurt + granola + berries
- Bagel with eggs
- If you train early: banana + protein shake 30–60 min before

After training (within a few hours)

Another **protein + carbs** meal. There's no urgent 30-minute "anabolic window", but eating within a few hours helps recovery.

Protein distribution

Spread protein over **3–5 meals** with 25–40 g each, rather than eating most of it at dinner.

CHAPTER 8

Hydration & Electrolytes

- **Baseline:** about half your body weight (lb) in ounces of water daily, plus 12–24 oz per hour of training.
- **Check your urine:** pale yellow is the goal.
- **Electrolytes:** if you sweat a lot, train in heat or feel lightheaded, add salt to meals or use an electrolyte mix.
- **Caffeine counts** toward hydration in moderation, and it doesn't dehydrate habitual coffee drinkers.

CHAPTER 9

Fiber, Micronutrients & Gut Health

- **Fiber:** aim for 25–35 g per day from vegetables, fruit, beans, oats and whole grains. It keeps you full and supports digestion.
- **Eat the rainbow:** different colored fruits and vegetables provide different vitamins and antioxidants.
- **Iron:** women who menstruate need more. Get it from red meat, beans, spinach and fortified cereals, paired with vitamin C. If you're constantly exhausted, ask your doctor to check your iron.
- **Calcium & vitamin D:** important for bone health in women who lift. Dairy, fortified alternatives, leafy greens and sunlight.

CHAPTER 10

How to Read a Nutrition Label

1. **Serving size first.** Everything on the label refers to one serving, and many packages contain several.
2. **Calories** per serving.
3. **Protein**: anything with 10 g+ protein per 100 calories is an excellent protein source.
4. **Added sugars**: try to keep them under ~25 g per day.
5. **Fiber**: more is better.
6. **Ingredients** are listed by weight, so the first ingredient is the main one.

> **The protein-per-calorie trick:** Divide grams of protein by calories × 100. A protein bar with 20 g protein and 200 calories = 10 g per 100 kcal (great). One with 10 g and 250 calories = 4 g per 100 kcal (basically a candy bar).

CHECK YOUR UNDERSTANDING

A bar has 12 g protein and 240 calories. How many grams of protein per 100 calories is that?

A. 5 g

B. 12 g

C. 20 g

Answer: A. 12 ÷ 240 × 100 = 5 g per 100 kcal. That's a snack, not a protein source. Aim for 10 g+ per 100 kcal.

CHAPTER 11

Cravings, Weekends & Alcohol

The 80/20 approach

Eat whole, minimally processed foods about 80% of the time and leave 20% for foods you love. Restriction that's too strict leads to binges, while flexibility keeps you consistent.

Handling cravings

- Eat enough protein and fiber. Most cravings are worse when you're under-eating.
- Have your treat **after a meal**, not on an empty stomach.
- Keep high-protein sweet options ready (protein pudding, Greek yogurt with honey, protein mug cake).
- Don't keep trigger foods in the house in large amounts.

Weekends

A common pattern is being "perfect" Monday to Friday and then eating 1,000+ extra calories each weekend day, which completely wipes out the weekly deficit. Keep weekends flexible but anchored: protein at every meal, plan your fun meal, and stay active.

Alcohol

Alcohol has 7 calories per gram, reduces sleep quality and recovery, and lowers your inhibitions around food. If you drink:

- Choose lower-calorie options (vodka soda, light beer, wine spritzer).
- Alternate every drink with water.
- Eat a protein-rich meal beforehand.
- Keep it to 1–2 drinks.

CHAPTER 12

Supplements: What Works and What's a Waste

TIER	SUPPLEMENT	VERDICT
✅ Proven	Creatine monohydrate (3–5 g/day)	Improves strength and muscle. Safe and well researched
✅ Proven	Protein powder	A convenient way to hit protein
✅ Proven	Caffeine	Improves performance. Stop 8+ hours before bed
⚠️ If needed	Vitamin D, iron, omega-3s	Useful if you're deficient. Get tested
⚠️ If needed	Electrolytes	Helpful for heavy sweaters
❌ Skip	Fat burners, "detox" teas, waist trainers	No meaningful fat loss and potential side effects
❌ Skip	BCAAs	Redundant if you eat enough protein

> Check with your doctor before starting supplements, especially if you're pregnant, breastfeeding or on medication.

CHAPTER 13

Your Cycle & the Scale

If you menstruate, your body weight naturally fluctuates during your cycle:

- **Luteal phase (the week or so before your period):** water retention can add 2–5 lb, appetite often increases and training may feel harder.
- **During/after your period:** water weight drops, often suddenly.

What to do

- Compare your weight to the **same point in your previous cycle**, not last week.
- Expect cravings before your period. Plan a slightly larger, high-protein meal or a planned treat rather than fighting it.
- If you feel weaker, train at RIR 3 and skip PR attempts.

CHECK YOUR UNDERSTANDING

Your weight jumps 3 lb in the week before your period. What's the most likely cause?

A. Fat gain

B. Water retention

C. Muscle loss

Answer: B. Hormonal shifts in the luteal phase commonly cause water retention, which drops after your period starts.

CHAPTER 14

Breaking a Fat-Loss Plateau

Before you change anything, make sure it's a real plateau: **no change in your weekly average weight AND measurements for 3+ weeks** (and you're not just before your period).

The checklist

1. **Are you tracking accurately?** Weigh food for a week. Oils, sauces, drinks and bites add up quickly.
2. **Are your weekends undoing your week?**
3. **Have your steps dropped?** NEAT often decreases unconsciously when you diet.
4. **Is your sleep under 7 hours?**
5. **How long have you been dieting?** After 8–12 weeks in a deficit, a 1–2 week **diet break at maintenance** can help you reset mentally and physically.

Then adjust (choose one)

- Reduce calories by 100–150, or
- Add 2,000 daily steps.

CHAPTER 15

Eating Out Like a Pro

Universal rules

1. Look at the menu before you go and decide what you'll order.
2. Start with the protein: grilled, roasted or baked.
3. Ask for sauces and dressings on the side.
4. Fill half your plate with vegetables.
5. Enjoy it. One restaurant meal won't ruin your progress.

The **Eating Out** tab has specific orders for popular restaurants.

CHAPTER 16

The 90-Minute Meal Prep System

Meal prep is the habit that makes everything else easier. When healthy food is ready, you eat it. When it isn't, you order takeout.

The system

1. **Plan (10 min, Saturday):** choose 2 proteins, 2 carbs and 2–3 veggies for the week. Write your grocery list using the Grocery tab.
2. **Shop (Saturday or Sunday).**
3. **Prep (90 min, Sunday):** follow the Sunday Prep checklist. Oven, stovetop and rice cooker all run at the same time.
4. **Mid-week mini prep (20 min, Wednesday):** cook one more batch of protein so food stays fresh.

Food safety

- Cooked food keeps 3–4 days in the fridge.
- Freeze anything for Thursday–Saturday on Sunday and thaw it the night before.
- Cool food within 2 hours of cooking before refrigerating.

CHAPTER 17

Frequently Asked Questions

Do I have to count calories forever? No. Track for 4–8 weeks to learn portion sizes, then switch to the plate method. Return to tracking when progress stalls.

Can I eat at night? Yes. Meal timing doesn't override total calories. If eating at night helps you stick to your plan, do it.

Is fruit too high in sugar? No. Whole fruit comes with fiber, water and vitamins. It's one of the best carb sources you can eat.

I'm vegetarian. Can I still hit my protein? Yes: Greek yogurt, cottage cheese, eggs, tofu, tempeh, seitan, edamame, lentils and protein powder. Combine several sources every day.

What if I'm not hungry enough to eat all my food? Use more calorie-dense foods (nut butters, olive oil, granola, dried fruit), drink some calories (smoothies) and eat more frequently.

PART II

Plans & Recipes

Your meal plan, recipes, grocery list and eating-out guide.

7-Day Meal Plan

HIGH PROTEIN

Monday

MEAL	WHAT TO EAT	PROTEIN
Breakfast	Protein Overnight Oats	~42 g
Lunch	Chicken Burrito Bowl	~60 g
Snack	Greek yogurt + berries + 1 tbsp granola	~22 g
Dinner	Air-Fryer Salmon, Sweet Potato & Green Beans	~33 g

Tuesday

MEAL	WHAT TO EAT	PROTEIN
Breakfast	3 eggs + 1 cup egg whites, spinach, 1 slice toast, fruit	~44 g
Lunch	Tuna Salad Wrap + side salad	~34 g
Snack	Protein shake + banana (post-workout)	~26 g
Dinner	Turkey Taco Bowl	~32 g

Wednesday

MEAL	WHAT TO EAT	PROTEIN
Breakfast	Cottage Cheese Protein Pancakes	~31 g
Lunch	Leftover Turkey Taco Bowl	~32 g
Snack	String cheese + apple + 10 almonds	~10 g
Dinner	Shrimp Stir-Fry	~43 g

Thursday

MEAL	WHAT TO EAT	PROTEIN
Breakfast	Protein Overnight Oats	~42 g
Lunch	Chicken Burrito Bowl	~60 g
Snack	Chocolate Protein Pudding	~35 g
Dinner	Turkey Meatballs & Marinara	~42 g

Friday

MEAL	WHAT TO EAT	PROTEIN
Breakfast	Egg Bites (3) + fruit	~29 g
Lunch	Leftover Turkey Meatballs	~42 g
Snack	Beef jerky + grapes	~12 g
Dinner	Planned flexible meal: protein first, enjoy it	~30 g

Saturday

MEAL	WHAT TO EAT	PROTEIN
Breakfast	Cottage Cheese Protein Pancakes	~31 g
Lunch	Grilled chicken salad with quinoa, feta & lemon vinaigrette	~40 g
Snack	Protein Mug Cake	~29 g
Dinner	Jerk Chicken Rice Bowl	~42 g

Sunday

MEAL	WHAT TO EAT	PROTEIN
Breakfast	Breakfast burrito: eggs, egg whites, potatoes, turkey bacon, salsa	~38 g
Lunch	Leftover Jerk Chicken Rice Bowl	~42 g
Snack	Greek yogurt + berries	~20 g
Dinner	Sheet-pan chicken, broccoli & potatoes (meal prep night)	~40 g

Recipes

12 RECIPES

Protein Overnight Oats

Breakfast 5 min + overnight 405 kcal P 42 g C 45 g F 7 g

- ½ cup old-fashioned oats
- 1 scoop vanilla whey protein
- ½ cup nonfat Greek yogurt
- ½ cup unsweetened almond milk
- 1 tsp chia seeds
- ½ cup berries

1. Stir oats, protein powder and chia seeds in a jar.
2. Add yogurt and milk and mix until smooth (add a splash more milk if thick).
3. Refrigerate overnight. Top with berries before eating.
4. Make 5 jars on Sunday. They keep 4 days.

Chicken Burrito Bowl

Lunch 15 min (with prepped chicken) 565 kcal P 60 g C 58 g F 9 g

- 5 oz cooked chicken breast, chopped
- ¾ cup cooked white or brown rice
- ½ cup black beans, rinsed
- ¼ cup pico de gallo or salsa
- 1 cup shredded lettuce
- 2 tbsp reduced-fat shredded cheese
- 2 tbsp nonfat Greek yogurt (as sour cream)
- Lime, cumin, chili powder

1. Season chicken with cumin, chili powder, garlic powder, salt and lime.
2. Layer rice, beans, chicken and lettuce in a bowl.
3. Top with pico, cheese and Greek yogurt.

Air-Fryer Salmon, Sweet Potato & Green Beans

Dinner 25 min 520 kcal P 33 g C 42 g F 23 g

- 5 oz salmon fillet
- 6 oz sweet potato, cubed
- 1 cup green beans
- 1 tsp olive oil
- Garlic powder, paprika, salt, pepper, lemon

1. Toss sweet potato with half the oil and seasonings. Air-fry at 400°F for 10 min.
2. Add green beans and seasoned salmon to the basket.
3. Air-fry 8–10 more minutes until the salmon flakes easily. Finish with lemon.

Turkey Taco Bowl

Dinner 20 min 390 kcal P 32 g C 28 g F 15 g

- 5 oz raw 93% lean ground turkey
- 1 tbsp taco seasoning
- ½ cup cooked rice
- ¼ cup salsa
- Lettuce, onion, peppers
- 2 tbsp reduced-fat cheese

1. Brown the turkey in a nonstick pan, breaking it up.
2. Add taco seasoning and a splash of water and simmer 3 minutes.
3. Serve over rice and lettuce with salsa and cheese. (Or use lettuce cups.)

Cottage Cheese Protein Pancakes

Breakfast 15 min 390 kcal P 31 g C 40 g F 9 g

- ½ cup oats
- ½ cup low-fat cottage cheese
- 1 egg + 2 egg whites
- ½ tsp baking powder
- Cinnamon, vanilla
- ½ cup berries + sugar-free syrup

1. Blend everything except toppings until smooth.
2. Cook ¼-cup portions on a medium-hot nonstick pan, about 2 minutes per side.
3. Top with berries and syrup.

Shrimp Stir-Fry

Dinner 15 min 480 kcal P 43 g C 54 g F 10 g

- 6 oz raw shrimp, peeled
- 2 cups stir-fry vegetables
- 2 tsp sesame oil
- 2 tbsp low-sodium soy sauce + 1 tsp honey
- Garlic, ginger, chili flakes
- ¾ cup cooked jasmine rice

1. Heat half the oil in a pan over high heat and cook the shrimp 1–2 min per side. Set aside.
2. Add remaining oil and vegetables and stir-fry 4 minutes.
3. Add garlic, ginger, soy and honey. Return the shrimp, toss and serve over rice.

Turkey Meatballs & Marinara

Dinner 30 min 575 kcal P 42 g C 62 g F 17 g

- 5 oz raw 93% lean ground turkey
- 2 tbsp breadcrumbs
- 1 egg white
- Italian seasoning, garlic, salt
- ½ cup marinara
- 2 oz dry pasta (or zucchini noodles)
- 1 tbsp parmesan

1. Mix turkey, breadcrumbs, egg white and seasonings. Roll into 6 balls.
2. Bake at 400°F for 15–18 min.
3. Warm the marinara, add the meatballs and serve over pasta with parmesan.

Egg Bites (makes 12)

Breakfast 30 min 295 kcal P 29 g C 5 g F 17 g

- 10 eggs
- 1 cup liquid egg whites
- ½ cup low-fat cottage cheese
- 1 cup chopped spinach, peppers & onions
- ½ cup shredded cheese
- Salt, pepper, garlic powder

1. Blend eggs, egg whites and cottage cheese until smooth.
2. Divide vegetables and cheese among 12 greased muffin cups and pour the egg mix over.
3. Bake at 350°F for 20–25 min. Macros shown are for 3 bites. Keeps 4 days refrigerated.

Chocolate Protein Pudding

Snack 3 min 215 kcal P 35 g C 17 g F 1 g

- 1 cup nonfat Greek yogurt
- ½ scoop chocolate whey protein
- 1 tsp cocoa powder
- 1 tsp honey

1. Stir everything together until smooth.
2. Chill 10 minutes for a thicker texture.

Jerk Chicken Rice Bowl

Dinner 30 min + marinating 545 kcal P 42 g C 49 g F 20 g

- 5 oz boneless skinless chicken thighs
- 2 tbsp jerk marinade
- ¾ cup rice & peas
- 1 cup shredded cabbage
- 1 tsp oil

1. Marinate chicken at least 1 hour (overnight is best).
2. Grill, air-fry or bake at 425°F for 18–22 min to 165°F internal.
3. Sauté cabbage in oil with salt and pepper. Serve with rice & peas.

Protein Mug Cake

Snack 3 min 185 kcal P 29 g C 12 g F 3 g

- 1 scoop whey protein
- 1 tbsp flour
- 1 tbsp cocoa powder
- ½ tsp baking powder
- 1 egg white
- 3 tbsp unsweetened almond milk

1. Mix dry ingredients in a large mug.
2. Stir in egg white and milk until smooth.
3. Microwave 60–75 seconds. Don't overcook or it gets rubbery.

Tuna Salad Wrap

Lunch 5 min 260 kcal P 34 g C 21 g F 4 g

- 1 can (5 oz) tuna in water, drained
- 3 tbsp nonfat Greek yogurt
- 1 tsp Dijon mustard
- Diced celery & red onion
- 1 high-fiber wrap
- Handful of spinach

1. Mix tuna, yogurt, mustard, celery, onion, salt and pepper.
2. Spread on the wrap with spinach and roll tightly.

Macros are approximate per serving and vary by brand.

Eating Out

GUIDE

WHERE	WHAT TO ORDER
Chipotle	Bowl with double chicken, rice, fajita veggies, black beans, fresh tomato salsa and lettuce. Skip or go light on sour cream, cheese and chips. Roughly 60 g+ protein.
Chick-fil-A	12-count grilled nuggets with a side salad or fruit cup, or the grilled chicken sandwich. Zesty Buffalo is one of the lower-calorie sauces.
Starbucks	Egg-white egg bites or the Protein Box. Add protein cold foam to your coffee or choose a protein drink.
Subway / sandwich shops	Double meat (chicken, turkey or steak) on a 6-inch or as a salad, extra veggies, mustard or light sauce.
Wings night	Dry-rub wings (lemon pepper, garlic parm dry, Cajun), celery and carrots, sauce on the side.
Mexican restaurant	Fajitas: load up on protein and peppers, use 2 tortillas, salsa and pico. Portion the chips once, then move the basket.
Sushi	Sashimi or nigiri plus a hand roll, edamame and miso soup. Limit tempura and creamy rolls.
Brunch	Omelet or eggs with turkey sausage and fruit. Share the pancakes if you want them. One mimosa is fine.

My Macro Targets

WORKSHEET

Use the My Macros calculator in the app, then record your numbers here. Recalculate every 4 weeks or after 5 lb of change.

Date	Weight (lb)	Height
Age	**Activity level**	**Goal**
Maintenance kcal	**Target kcal**	**Water (oz)**
Protein (g)	**Carbs (g)**	**Fat (g)**
Protein per meal	**Carbs per meal**	**Fat per meal**
