8 WEEKS · 3 DAYS/WEEK · 24 WORKOUTS

How to use this book

This book is the companion to your interactive app. The app is the fastest way to train: it logs every set, remembers your weights, runs your rest timer and charts your progress. This PDF gives you the same material in a format you can read, print and fill in.

Tap here to open your interactive program →

The interactive program tracks every set, runs your rest timer, charts your progress and includes every chapter with quizzes. On your phone, tap *Share → Add to Home Screen* so it opens like an app.

This PDF is interactive. Tap any entry in the table of contents to jump to it, use your PDF reader's bookmarks panel to navigate, and fill in the workbook pages at the back directly in Adobe Acrobat, Apple Books/Preview, or most PDF apps. Your entries save with the file.

This program is for educational purposes and is not medical advice. Consult your doctor before starting a new exercise or nutrition plan, especially if you are pregnant, injured or have a medical condition. Stop any exercise that causes pain.

PART I

The Guide

11 chapters. Read Chapters 1–4 before you start, and use the rest as a reference.

CHAPTER 1

Welcome & How This Program Works

Can't do a single pull-up yet? Good. That's exactly who I wrote this for. A pull-up is one of the hardest bodyweight moves there is, and it's one of the most satisfying things you'll ever do in the gym. Over the next 8 weeks you'll build the exact strength it takes to pull your chin over that bar. Then you'll test it, film it and keep stacking reps.

The structure

DAY	SESSION	FOCUS
Day 1	Pull Strength	Heavy assisted pull-ups, slow negatives, rows, dead hangs
Day 2	Lats + Core	Lat pulldowns, inverted rows, straight-arm pulldowns, hollow holds
Day 3	Skill + Volume	Band-assisted pull-ups, flexed-arm hangs, cable rows, face pulls

Train on three non-consecutive days, such as Monday, Wednesday and Friday. You can run it on its own or alongside lower-body training. If you're also running the Glute Specialist Program, swap that program's Day 2 (Upper Body) for these three days.

The phases

WEEKS	PHASE	MAIN SETS × REPS	WHAT CHANGES
1–2	Foundation	3 × 8	Learn the movement, find your starting assistance
3–4	Build	4 × 6	Less assistance, longer negatives
5	Deload	2 × 6	Half the work. Your body catches up
6	Strength	5 × 4	Lowest assistance yet, first unassisted attempt
7	Peak	4 × 3	Minimum help, daily pull-up singles
8	Pull-Up Day	Test	Your first real pull-up (or your new max)

> **Coach's note:** A pull-up isn't about being skinny or "naturally strong." It's a skill plus a strength. You practice the skill three days a week, and you build the strength one less pound of assistance at a time.

CHECK YOUR UNDERSTANDING

What happens in Week 5?

A. You test your max

B. A deload: half the sets so your strength can catch up

C. You add extra sets

Answer: B. Week 5 is a planned recovery week. Strength shows up AFTER recovery, which is why Week 6 is your strongest week yet.

CHAPTER 2

Test Day: Find Your Starting Point

Before Week 1, spend one session finding out where you are. Write down every number. You'll compare against them in Week 8.

The 4 tests

TEST	HOW	WRITE DOWN
1. Dead hang	Hang from the bar with straight arms as long as you can	Seconds
2. Flexed-arm hang	Step up so your chin is over the bar, then hold	Seconds
3. Negative	Lower from the top as slowly as you can	Seconds to the bottom
4. Pull-up	One honest attempt from a dead hang	Reps (0 is a fine answer)

Rest 3 minutes between tests.

Where to start

YOUR RESULTS	YOUR LEVEL	START HERE
Hang under 20 sec, no flexed hang	Level 1	Heavy assistance. Hold the shorter times in Week 1 with toes on the box if needed
Hang 20–45 sec, flexed hang under 10 sec	Level 2	Follow the program exactly as written
Flexed hang 10+ sec, negative 5+ sec	Level 3	Use less assistance from Week 1 and the longer negatives
1–3 real pull-ups already	Level 4	Replace the assisted pull-ups with real reps and use the band only for the last sets

Finding your assistance weight

On the assisted pull-up machine, **more weight means more help**. Start at about half your body weight. Do 8 reps. If the last 2 reps were hard but clean, that's your Week 1 number. If you blew through 8, take off 10 lb. If you couldn't finish 8 clean reps, add 10 lb.

CHECK YOUR UNDERSTANDING

On an assisted pull-up machine, what does adding more weight do?

A. Gives you more help, so the exercise gets easier

B. Makes the exercise harder

C. Nothing, it's just for balance

Answer: A. The weight is a counterbalance that pushes you up. Your goal every week is to need LESS of it.

CHAPTER 3

Why Pull-Ups Feel Impossible (and Why They Aren't)

If you've ever hung from a bar and gone absolutely nowhere, you're in very good company. Most women can't do a pull-up the first time they try. Here's why, and why it changes fast.

The real reasons

1. **Nobody trained it.** Most women's programs are full of glutes and legs and almost no vertical pulling. Strength comes from practice, and you never practiced.
2. **The strength curve.** The hardest part of a pull-up is the very first inch from a dead hang. Most people never build strength there, so they never get started.
3. **Grip gives out first.** Many women are strong enough to pull but can't hold on long enough. Dead hangs fix this.
4. **Relative strength.** A pull-up means lifting your whole body. Getting stronger matters far more than losing weight, but both help.

Why this program works

You'll train the pull-up from every angle:

- **Assisted reps** train the full movement with less load.
- **Negatives** build strength in the lowering phase, where muscles are about 20–40% stronger. Your lats learn to control your full body weight long before they can lift it.
- **Holds** build strength at the top and in the middle, where most attempts fail.
- **Rows and pulldowns** grow the lats and mid-back muscles that do the work.

> **Truth bomb:** You don't "find out" if you can do a pull-up. You build it. Every rep in this program is a brick.

CHAPTER 4

Pull-Up Anatomy

Lats (latissimus dorsi)

Your biggest back muscles. They run from under your armpits to your lower back and pull your elbows down to your sides. They're the main engine of a pull-up, and strong lats are also what create that snatched-waist V-shape.

Mid-back (rhomboids, middle and lower traps)

These pull your shoulder blades down and together. The very first movement of every pull-up starts here. That's why you'll do scapular pull-ups.

Biceps and forearms

Your biceps help bend the elbow, especially near the top. Your forearms hold you on the bar. Hammer curls and dead hangs train both.

Core

A tight core stops your body from swinging and makes the pull more efficient. Hollow body holds and hanging knee raises teach you to stay in one piece on the bar.

CHECK YOUR UNDERSTANDING

Which muscle is the main engine of a pull-up?

A. Biceps

B. Lats

C. Chest

Answer: B. Your lats pull your elbows down to your sides. Biceps help, but the lats do most of the work.

CHAPTER 5

Perfect Pull-Up Technique

The setup

1. **Grip:** palms facing away, hands slightly wider than your shoulders, thumbs wrapped around the bar.
2. **Dead hang:** arms straight, legs together, a slight squeeze in your glutes and abs.
3. **Body:** a very slight "hollow" shape, with ribs down and legs slightly in front of you. Not a big arch, not a big swing.

The rep, step by step

1. **Set the shoulders.** Pull your shoulder blades DOWN, away from your ears. Your body rises an inch and your arms stay straight. This is the scapular pull-up you'll practice.
2. **Drive the elbows.** Think about pulling your elbows down into your back pockets, not about pulling with your hands.
3. **Chest to the bar.** Lift your chest toward the bar. Your chin clears the bar naturally.
4. **Pause.** Hold the top for one second. Squeeze.
5. **Lower with control.** Two to three seconds back to straight arms. Every rep starts from a full hang.

Pull-up vs chin-up

	PULL-UP	CHIN-UP
Grip	Palms away, slightly wide	Palms toward you, shoulder-width
Main muscles	Lats, mid-back	Lats plus more biceps
Difficulty	Harder	Usually easier for beginners

Many women get a chin-up first. That's a huge win, so test both in Week 8.

Common mistakes

- **Kicking and swinging (kipping).** It looks like a pull-up but builds none of the strength.
- **Half reps.** If your arms don't straighten at the bottom, the rep doesn't count.
- **Chin poking.** Reaching your chin up instead of bringing your chest to the bar.
- **Shrugging.** Shoulders up by your ears makes the lift harder and strains your neck.
- **Dropping.** Falling out of the top wastes the best strength-building part of the rep.

CHECK YOUR UNDERSTANDING

What should you think about to pull with your lats, not just your arms?

A. Squeeze the bar as hard as possible

B. Drive your elbows down toward your back pockets

C. Pull your chin up first

Answer: B. "Elbows to back pockets" switches on your lats. Your hands are just hooks.

CHAPTER 6

The Pull-Up Ladder: Assistance, Negatives & Holds

Think of your first pull-up as the top of a ladder. Each tool below is a step.

Step 1: Assisted pull-ups (machine or band)

Your main strength builder. You do the full movement with help, then you need less help every week.

Machine vs band: The machine gives the same help through the whole rep and is easy to track in pounds. A band gives the MOST help at the bottom (where it's stretched) and the least at the top. Use the machine on Day 1 for strength and the band on Day 3 for skill.

BAND COLOR (TYPICAL)	HELP
Red (thin)	~10–35 lb
Black	~25–65 lb
Purple	~35–85 lb
Green (thick)	~50–120 lb

Colors vary by brand. Just remember: thinner band, less help.

Step 2: Negatives

Jump or step to the top and lower yourself as slowly as you can. Negatives build strength faster than almost anything else, but they also cause the most soreness. That's why they're limited to Day 1 and kept to a few quality reps.

Rule: if your lowering speeds up or you drop through the bottom half, the set is over.

Step 3: Holds

Flexed-arm hangs build strength at the top. Dead hangs build grip and healthy shoulders. Hollow holds teach you to stay tight. If you can hold your chin over the bar for 30 seconds, a pull-up is very close.

Step 4: Real reps

From Week 6, you'll try one unassisted pull-up at the start of training while you're fresh. Some women get it in Week 6. Some in Week 8. Some after a second round. All of them get it.

CHECK YOUR UNDERSTANDING

When should a negative set end?

A. After exactly 10 reps

B. When your lowering speeds up or you drop through the bottom

C. Never, keep going until you can't hang on

Answer: B. Slow, controlled lowering is what builds strength. Once it turns into dropping, you're only adding soreness.

CHAPTER 7

How to Progress Every Week

The assistance rule

Each week, if every rep last week was clean and controlled, **take 5 lb off the machine** (or 5–10 lb if you're still above half your body weight). If you missed reps, keep the same assistance and beat it next week.

Change ONE thing at a time

In any week you can make it harder in one of these ways. Pick one:

- Less assistance
- A longer negative (one more second)
- A longer hold (5 more seconds)
- One more rep on rows or pulldowns

Changing everything at once is how progress stalls.

Track it

Log every set in the Program tab. For assisted pull-ups, log the assistance weight in the weight box. A smaller number is better. Your Progress tab charts the lifts where heavier is better: lat pulldown, rows and straight-arm pulldowns.

Reading your effort (RIR)

RIR	FEELS LIKE
3	Challenging, reps still fast
2	Hard. Reps slow down
1	Very hard. One clean rep left
0	You couldn't do another

Stay at RIR 1–2 on the main pulls. Pull-ups are a skill, and practicing sloppy reps teaches sloppy reps.

CHECK YOUR UNDERSTANDING

Last week every assisted pull-up was clean. What do you do this week?

A. Take about 5 lb of assistance off the machine

B. Add 5 lb of assistance

C. Keep everything exactly the same forever

Answer: A. Less assistance means more of YOU doing the lifting. That's the whole program.

CHAPTER 8

Grip, Hands & Shoulder Health

Grip

If your hands give out before your back does, your grip is the weak link.

- Do every dead hang in the program, and don't skip them when you're tired.
- Chalk helps a lot. Liquid chalk works in gyms that ban the powder.
- Wrap your thumbs around the bar. A thumbless grip slips.

Calluses

Calluses are normal. Torn calluses aren't. File them down weekly with a pumice stone, keep your hands moisturized, and hold the bar at the base of your fingers rather than deep in your palm.

Shoulder warm-up (5 minutes, every session)

1. Arm circles, 10 forward and 10 back
2. Band pull-aparts × 15
3. Scapular pull-ups × 8
4. Dead hang × 15 seconds
5. One light set of your first exercise

The rules

- Sharp pain means stop. Muscle burn is fine. Joint pain isn't.
- Elbow pain often comes from gripping too narrow or going too hard on negatives. Widen slightly and reduce negatives for a week.
- Never drop from the top of a pull-up onto straight arms with loose shoulders.

CHAPTER 9

Body Weight, Nutrition & Recovery

Does body weight matter?

Yes and no. A pull-up means lifting your body weight, so carrying a little less makes it easier. But **getting stronger matters far more than getting smaller**. Many women hit their first pull-up while maintaining or even gaining weight, because they built muscle.

Don't crash diet for a pull-up. A big calorie deficit makes it very hard to build strength.

Fuel for strength

- **Protein:** 0.7–1.0 g per lb of goal body weight daily.
- **Calories:** maintenance or a small deficit (no more than about 300 calories).
- **Before training:** a carb + protein meal 1–3 hours before.
- **Creatine monohydrate:** 3–5 g daily is one of the best-researched supplements for strength.

See **Fuel Like A Baddie** for full macro calculations and meal plans.

Recovery

Sleep is when your back actually gets stronger. Aim for 7–9 hours. Keep at least one rest day between pull-up sessions, and take the Week 5 deload seriously. It's part of the program, not a break from it.

CHAPTER 10

Pull-Up Day Protocol

Week 8, Day 1. This is the day you've been building toward. Make it an event.

Before Pull-Up Day

- Sleep well for 2 nights before.
- Eat a solid meal 2–3 hours before training.
- Set up your phone to film from the side.
- Bring chalk, and your hype playlist.

The warm-up

STEP	WHAT	REST
1	Shoulder warm-up from Chapter 8	—
2	Assisted pull-ups × 5 at your Week 1 assistance	2 min
3	Assisted pull-ups × 2 at your lowest assistance	2 min
4	Flexed-arm hang × 5 seconds	3 min

The attempt

1. Chalk up. Grip slightly wider than your shoulders.
2. Dead hang, ribs down, legs together.
3. Shoulders DOWN first.
4. Elbows to your back pockets. Chest to the bar.
5. Don't stop pulling until your chin clears.

You get **3 attempts**, with 3–4 minutes of rest between them. If the pull-up goes, try for a second rep on the next attempt. If you got one rep, try a chin-up too.

Didn't get it yet?

You're closer than you think. Compare your Test Day numbers: your hang time, flexed-arm hang and negative time will all be dramatically better. Take an easy week, then rerun Weeks 3–8 starting from your current assistance. Most women who don't get it in round one get it in round two.

Log it

Enter your result on the **PR Wall**, compare it with your Test Day, and tag me in the video. I want to see it!

CHECK YOUR UNDERSTANDING

How many pull-up attempts do you get on Pull-Up Day?

A. One

B. Three, with 3–4 minutes of rest between them

C. As many as you want back to back

Answer: B. Full rest between attempts means every try is your best one.

CHAPTER 11

Frequently Asked Questions

I can't hold on to the bar for even 10 seconds. Where do I start? Level 1 in Chapter 2. Do the dead hangs with your toes lightly on a box, use heavy assistance and follow the plan. Grip comes back fast.

My gym doesn't have an assisted pull-up machine. Use a band for all assisted pull-ups, and use the lat pulldown to track strength in pounds.

Can I do this at home? You'll need a doorway or mounted pull-up bar, a set of loop bands and a few dumbbells. Replace the cable exercises with band rows and band straight-arm pulldowns.

Will pull-ups make my back bulky? No. They'll build a stronger, more defined back and shoulders, which makes your waist look smaller. Building big muscle takes years of trying on purpose.

I'm sore for days after negatives. Normal at the start. Do fewer reps, keep the full slow lowering, and the soreness drops after 2–3 weeks.

What do I do after Week 8? If you got your pull-up: rerun Weeks 3–8 using real reps for your first sets and the band only after that. If you didn't yet: rerun Weeks 3–8 from your current assistance. Either way, you're stronger than you were 8 weeks ago.

PART II

The Program

Every workout, week by week. Log your sets in the app or in the fillable workbook at the back of this book.

Week 1

FOUNDATION PHASE

Test day first (Chapter 2). Then set your assistance so 8 reps feel hard but clean.

Day 1 · Pull Strength

Heavy assisted pull-ups and slow negatives build the strength to pull your own body.

EXERCISE	SETS × REPS	RIR	REST
Assisted Pull-Up	3 × 8	2–3	2 min
Negative Pull-Up	3 × 3 (3-sec lower)	2	2 min
Single-Arm DB Row	3 × 12 /side	2	75s
Scapular Pull-Up	3 × 12	2	75s
Dead Hang	3 × 20s	2	60s

Day 2 · Lats + Core

Bigger, stronger lats and a tight core for a body that moves as one.

EXERCISE	SETS × REPS	RIR	REST
Lat Pulldown	3 × 8	2–3	2 min
Inverted Row	3 × 8	2–3	2 min
Straight-Arm Pulldown	3 × 12	2	75s
Hammer Curl	2 × 12	1	60s
Hollow Body Hold	3 × 20s	2	60s

Day 3 · Skill + Volume

Practice the real movement with a band and own the top position.

EXERCISE	SETS × REPS	RIR	REST
Band-Assisted Pull-Up	3 × 8	2–3	2 min
Flexed-Arm Hang	3 × 20s	2	60s
Seated Cable Row	3 × 12	2	75s
Face Pulls	3 × 12	2	75s
Hanging Knee Raise	2 × 12	1	60s

Week 2

FOUNDATION PHASE

Remove 5 lb of assistance (or use a thinner band) if every rep last week was clean.

Day 1 · Pull Strength

Heavy assisted pull-ups and slow negatives build the strength to pull your own body.

EXERCISE	SETS × REPS	RIR	REST
Assisted Pull-Up	3 × 8	2	2 min
Negative Pull-Up	3 × 3 (4-sec lower)	2	2 min
Single-Arm DB Row	3 × 12 /side	2	75s
Scapular Pull-Up	3 × 12	2	75s
Dead Hang	3 × 25s	2	60s

Day 2 · Lats + Core

Bigger, stronger lats and a tight core for a body that moves as one.

EXERCISE	SETS × REPS	RIR	REST
Lat Pulldown	3 × 8	2	2 min
Inverted Row	3 × 8	2	2 min
Straight-Arm Pulldown	3 × 12	2	75s
Hammer Curl	2 × 12	1	60s
Hollow Body Hold	3 × 25s	2	60s

Day 3 · Skill + Volume

Practice the real movement with a band and own the top position.

EXERCISE	SETS × REPS	RIR	REST
Band-Assisted Pull-Up	3 × 8	2	2 min
Flexed-Arm Hang	3 × 25s	2	60s
Seated Cable Row	3 × 12	2	75s
Face Pulls	3 × 12	2	75s
Hanging Knee Raise	2 × 12	1	60s

Week 3

BUILD PHASE

Fewer reps, less help. Drop assistance again and add a set.

Day 1 · Pull Strength

Heavy assisted pull-ups and slow negatives build the strength to pull your own body.

EXERCISE	SETS × REPS	RIR	REST
Assisted Pull-Up	4 × 6	2	2 min
Negative Pull-Up	4 × 3 (5-sec lower)	1–2	2 min
Single-Arm DB Row	3 × 10 /side	1–2	75s
Scapular Pull-Up	3 × 10	1–2	75s
Dead Hang	3 × 30s	1–2	60s

Day 2 · Lats + Core

Bigger, stronger lats and a tight core for a body that moves as one.

EXERCISE	SETS × REPS	RIR	REST
Lat Pulldown	4 × 6	2	2 min
Inverted Row	4 × 6	2	2 min
Straight-Arm Pulldown	3 × 10	1–2	75s
Hammer Curl	3 × 10	1	60s
Hollow Body Hold	3 × 30s	1–2	60s

Day 3 · Skill + Volume

Practice the real movement with a band and own the top position.

EXERCISE	SETS × REPS	RIR	REST
Band-Assisted Pull-Up	4 × 6	2	2 min
Flexed-Arm Hang	3 × 30s	1–2	60s
Seated Cable Row	3 × 10	1–2	75s
Face Pulls	3 × 10	1–2	75s
Hanging Knee Raise	3 × 10	1	60s

Week 4

BUILD PHASE

Beat Week 3: less assistance OR a longer lowering. Pick one, not both.

Day 1 · Pull Strength

Heavy assisted pull-ups and slow negatives build the strength to pull your own body.

EXERCISE	SETS × REPS	RIR	REST
Assisted Pull-Up	4 × 6	1–2	2 min
Negative Pull-Up	4 × 3 (6-sec lower)	1	2 min
Single-Arm DB Row	3 × 10 /side	1	75s
Scapular Pull-Up	3 × 10	1	75s
Dead Hang	3 × 35s	1	60s

Day 2 · Lats + Core

Bigger, stronger lats and a tight core for a body that moves as one.

EXERCISE	SETS × REPS	RIR	REST
Lat Pulldown	4 × 6	1–2	2 min
Inverted Row	4 × 6	1–2	2 min
Straight-Arm Pulldown	3 × 10	1	75s
Hammer Curl	3 × 10	1	60s
Hollow Body Hold	3 × 35s	1	60s

Day 3 · Skill + Volume

Practice the real movement with a band and own the top position.

EXERCISE	SETS × REPS	RIR	REST
Band-Assisted Pull-Up	4 × 6	1–2	2 min
Flexed-Arm Hang	3 × 35s	1	60s
Seated Cable Row	3 × 10	1	75s
Face Pulls	3 × 10	1	75s
Hanging Knee Raise	3 × 10	1	60s

Week 5

DELOAD PHASE

Recovery week. Same assistance as Week 4, half the sets. Your strength catches up this week.

Day 1 · Pull Strength

Heavy assisted pull-ups and slow negatives build the strength to pull your own body.

EXERCISE	SETS × REPS	RIR	REST
Assisted Pull-Up	2 × 6	3	2 min
Negative Pull-Up	2 × 3 (4-sec lower)	3	2 min
Single-Arm DB Row	2 × 10 /side	3	75s
Scapular Pull-Up	2 × 10	3	75s
Dead Hang	2 × 20s	3	60s

Day 2 · Lats + Core

Bigger, stronger lats and a tight core for a body that moves as one.

EXERCISE	SETS × REPS	RIR	REST
Lat Pulldown	2 × 6	3	2 min
Inverted Row	2 × 6	3	2 min
Straight-Arm Pulldown	2 × 10	3	75s
Hammer Curl	2 × 10	2	60s
Hollow Body Hold	2 × 20s	3	60s

Day 3 · Skill + Volume

Practice the real movement with a band and own the top position.

EXERCISE	SETS × REPS	RIR	REST
Band-Assisted Pull-Up	2 × 6	3	2 min
Flexed-Arm Hang	2 × 20s	3	60s
Seated Cable Row	2 × 10	3	75s
Face Pulls	2 × 10	3	75s
Hanging Knee Raise	2 × 10	2	60s

Week 6

STRENGTH PHASE

Heavy and strong. Your lowest assistance yet. Try ONE unassisted rep at the start of Day 1.

Day 1 · Pull Strength

Heavy assisted pull-ups and slow negatives build the strength to pull your own body.

EXERCISE	SETS × REPS	RIR	REST
Assisted Pull-Up	5 × 4	1–2	2.5 min
Negative Pull-Up	4 × 2 (8-sec lower)	1	2.5 min
Single-Arm DB Row	3 × 8 /side	1	90s
Scapular Pull-Up	3 × 8	1	90s
Dead Hang	3 × 40s	1	75s

Day 2 · Lats + Core

Bigger, stronger lats and a tight core for a body that moves as one.

EXERCISE	SETS × REPS	RIR	REST
Lat Pulldown	5 × 4	1–2	2.5 min
Inverted Row	5 × 4	1–2	2.5 min
Straight-Arm Pulldown	3 × 8	1	90s
Hammer Curl	3 × 12	0–1	60s
Hollow Body Hold	3 × 40s	1	75s

Day 3 · Skill + Volume

Practice the real movement with a band and own the top position.

EXERCISE	SETS × REPS	RIR	REST
Band-Assisted Pull-Up	5 × 4	1–2	2.5 min
Flexed-Arm Hang	3 × 40s	1	75s
Seated Cable Row	3 × 8	1	90s
Face Pulls	3 × 8	1	90s
Hanging Knee Raise	3 × 12	0–1	60s

Week 7

PEAK PHASE

Minimum help. Start each day with 3 singles: your best attempt at a full pull-up, 2 min rest between.

Day 1 · Pull Strength

Heavy assisted pull-ups and slow negatives build the strength to pull your own body.

EXERCISE	SETS × REPS	RIR	REST
Assisted Pull-Up	4 × 3	1	3 min
Negative Pull-Up	3 × 2 (10-sec lower)	1	3 min
Single-Arm DB Row	3 × 8 /side	1	90s
Scapular Pull-Up	3 × 8	1	90s
Dead Hang	3 × 45s	1	75s

Day 2 · Lats + Core

Bigger, stronger lats and a tight core for a body that moves as one.

EXERCISE	SETS × REPS	RIR	REST
Lat Pulldown	4 × 3	1	3 min
Inverted Row	4 × 3	1	3 min
Straight-Arm Pulldown	3 × 8	1	90s
Hammer Curl	2 × 12	0	60s
Hollow Body Hold	3 × 45s	1	75s

Day 3 · Skill + Volume

Practice the real movement with a band and own the top position.

EXERCISE	SETS × REPS	RIR	REST
Band-Assisted Pull-Up	4 × 3	1	3 min
Flexed-Arm Hang	3 × 45s	1	75s
Seated Cable Row	3 × 8	1	90s
Face Pulls	3 × 8	1	90s
Hanging Knee Raise	2 × 12	0	60s

Week 8

PULL-UP DAY PHASE

Day 1 is TEST DAY. Follow the Pull-Up Day Protocol (Chapter 10), film it and log it on the PR Wall.

Day 1 · Pull Strength

Heavy assisted pull-ups and slow negatives build the strength to pull your own body.

EXERCISE	SETS × REPS	RIR	REST
Assisted Pull-Up	3 × 3	2	3 min
Negative Pull-Up	2 × 2 (6-sec lower)	2	3 min
Single-Arm DB Row	2 × 10 /side	2	75s
Scapular Pull-Up	2 × 10	2	75s
Dead Hang	2 × Max hold	0	90s

Day 2 · Lats + Core

Bigger, stronger lats and a tight core for a body that moves as one.

EXERCISE	SETS × REPS	RIR	REST
Lat Pulldown	3 × 3	2	3 min
Inverted Row	3 × 3	2	3 min
Straight-Arm Pulldown	2 × 10	2	75s
Hammer Curl	2 × 10	1	60s
Hollow Body Hold	2 × Max hold	0	90s

Day 3 · Skill + Volume

Practice the real movement with a band and own the top position.

EXERCISE	SETS × REPS	RIR	REST
Band-Assisted Pull-Up	3 × 3	2	3 min
Flexed-Arm Hang	2 × Max hold	0	90s
Seated Cable Row	2 × 10	2	75s
Face Pulls	2 × 10	2	75s
Hanging Knee Raise	2 × 10	1	60s

PART III

Exercise Library

Setup, execution, cues, common mistakes and swaps for all 15 exercises in this program.

Assisted Pull-Up

Upper · Lats, mid-back, biceps, grip · Equipment: Assisted pull-up machine

SETUP

1. Set the assistance weight. On this machine MORE weight = MORE help, so start where you can do 8 clean reps.
2. Kneel (or stand) on the pad and grab the handles slightly wider than your shoulders, palms facing away.
3. Let the machine lower you until your arms are straight and your shoulders stretch toward your ears.

EXECUTION

1. Start every rep by pulling your shoulder blades DOWN, as if putting them in your back pockets.
2. Drive your elbows down toward your ribs and pull until your chin clears the bar.
3. Pause for a second at the top with your chest proud.
4. Lower slowly (2–3 seconds) all the way to straight arms.

CUES

- Shoulders down first, then pull
- Elbows to your back pockets
- Chest to the bar, not chin poking forward

COMMON MISTAKES

- Using so much assistance that the last reps aren't hard
- Half reps that never reach straight arms
- Shrugging your shoulders up to your ears
- Dropping fast on the way down

EASIER / HARDER

Add 10 lb more assistance, or use the Lat Pulldown / Remove 5–10 lb of assistance, or add a 3-sec lowering

SWAPS

Band-Assisted Pull-Up, Lat Pulldown

Band-Assisted Pull-Up

Upper · Lats, mid-back, biceps, core · Equipment: Pull-up bar, long loop resistance band

SETUP

1. Loop a long band around the bar and pull it through itself so it's secure.
2. Step on a box, put one foot (or one knee) in the band and grab the bar slightly wider than your shoulders.
3. Step off the box slowly and hang with straight arms. Squeeze your legs together and tighten your core.

EXECUTION

1. Pull your shoulder blades down to start.
2. Drive your elbows toward your ribs until your chin is over the bar.
3. Lower slowly to straight arms. Don't let the band bounce you.
4. Use the thinnest band you can for clean reps. Thinner band = less help.

CUES

- Body tight like a plank
- Pull the bar to your collarbone
- Control the band, don't ride it

COMMON MISTAKES

- Bouncing out of the bottom using the band's stretch
- Kipping or swinging the legs
- Never moving to a thinner band

EASIER / HARDER

Thicker band, or two feet in the band / Thinner band, or a 3-sec pause at the top

SWAPS

Assisted Pull-Up machine, Negative Pull-Up

Dead Hang

Upper · Grip, forearms, shoulders, lats · Equipment: Pull-up bar

SETUP

1. Step onto a box and grab the bar with a full grip (thumbs wrapped around).
2. Hands slightly wider than your shoulders.

EXECUTION

1. Step off and hang with straight arms. Keep a slight squeeze in your shoulders so you aren't totally limp.
2. Breathe normally and hang for the time in the program.
3. Step back onto the box. Don't drop.

CUES

- Squeeze the bar like you're wringing out a towel
- Ribs down, legs together
- Breathe

COMMON MISTAKES

- Hanging totally loose on sore shoulders
- Holding your breath
- Thumbs not wrapped

EASIER / HARDER

Keep your toes on the box to take some weight / Single-arm assisted hangs or a towel grip

SWAPS

Farmer's carry for grip

Face Pulls

Upper · Rear delts, upper back, rotator cuff · Equipment: Cable, rope

SETUP

1. Set the pulley at upper chest to face height and attach a rope.

EXECUTION

1. Pull the rope toward your eyebrows, splitting it apart.
2. Rotate your hands back so your knuckles face the ceiling at the end.
3. Return slowly.

CUES

- Elbows high
- Pull apart

COMMON MISTAKES

- Too heavy
- Leaning back

EASIER / HARDER

Band face pull / Pause at the end

SWAPS

Rear Delt Fly, Band Pull-Apart

Flexed-Arm Hang

Upper · Lats, biceps, mid-back (top-position strength) · Equipment: Pull-up bar, box

SETUP

1. Stand on a box under the bar, grab it slightly wider than your shoulders.
2. Step up so your chin is above the bar and your elbows are tucked tight.

EXECUTION

1. Lift your feet and HOLD at the top with your chin over the bar.
2. Keep your chest high and your shoulders down.
3. When you can't hold the top, lower as slowly as you can. That counts too.

CUES

- Chest to the bar
- Squeeze your elbows into your ribs
- Breathe through it

COMMON MISTAKES

- Chin resting on the bar
- Letting your shoulders creep up to your ears
- Dropping instead of lowering at the end

EASIER / HARDER

Hold at the halfway point (elbows at 90°) or use a band / Hold at three heights: top, halfway, just below halfway

SWAPS

Isometric hold at the top of the Assisted Pull-Up

Hammer Curl

Upper · Biceps, brachialis, forearms · Equipment: Dumbbells

SETUP

1. Stand tall holding dumbbells with palms facing each other.

EXECUTION

1. Curl up while keeping your elbows still.
2. Lower over 2–3 seconds.

CUES

- Elbows pinned

COMMON MISTAKES

- Swinging

EASIER / HARDER

Seated / Cross-body hammer curls

SWAPS

Rope Cable Curl

Hanging Knee Raise

Core · Lower abs, hip flexors · Equipment: Pull-up bar or captain's chair

SETUP

1. Hang from a bar with an overhand grip, or use a captain's chair.

EXECUTION

1. Curl your knees toward your chest by tucking your pelvis up.
2. Lower slowly without swinging.

CUES

- Curl, don't just lift
- No swinging

COMMON MISTAKES

- Swinging for momentum
- Only lifting the knees to 90° without pelvic tuck

EASIER / HARDER

Lying Reverse Crunch / Straight-leg raise

SWAPS

Reverse Crunch, Captain's Chair Raise

Hollow Body Hold

Core · Abs, hip flexors, deep core · Equipment: Floor or mat

SETUP

1. Lie on your back. Press your lower back firmly into the floor.
2. Reach your arms overhead and lift your shoulders and legs off the floor.

CUES

- Low back glued down
- Ribs pulled toward your hips
- Long and tight

EASIER / HARDER

Bend your knees and keep your arms by your sides / Lower your legs and arms closer to the floor, or rock gently

EXECUTION

1. Hold a banana shape with your lower back glued to the floor.
2. Keep your legs together and toes pointed.
3. Breathe and hold for the time in the program.

COMMON MISTAKES

- Lower back arching off the floor
- Holding your breath
- Neck straining

SWAPS

Weighted Plank

Inverted Row

Upper · Mid-back, lats, rear delts, biceps, core · Equipment: Smith machine or squat rack bar

SETUP

1. Set a bar at about hip height in a Smith machine or rack.
2. Lie under it, grab it slightly wider than your shoulders and walk your feet out.
3. Make your body one straight line from heels to head, like an upside-down plank.

CUES

- Plank body
- Chest to the bar
- Squeeze the shoulder blades together

EASIER / HARDER

Raise the bar or bend your knees / Lower the bar, put your feet on a bench, or add a 2-sec pause

EXECUTION

1. Pull your chest up to the bar by driving your elbows back.
2. Squeeze your shoulder blades together at the top.
3. Lower slowly to straight arms without letting your hips sag.

COMMON MISTAKES

- Hips sagging
- Neck reaching for the bar
- Partial reps

SWAPS

Seated Cable Row, TRX Row

Lat Pulldown

Upper · Lats, mid-back, biceps · Equipment: Lat pulldown machine

SETUP

1. Adjust the thigh pad so your legs are locked in snugly.
2. Grab the bar slightly wider than shoulder-width with an overhand grip.

EXECUTION

1. Lean back about 10–15° and lift your chest.
2. Pull the bar to your upper chest by driving your elbows down toward your back pockets.
3. Squeeze your lats for a moment, then let the bar rise slowly until your arms are straight and your shoulders stretch up.

CUES

- Elbows to back pockets
- Chest up to meet the bar
- Full stretch at the top

COMMON MISTAKES

- Pulling with the arms and biceps only
- Swinging the torso back for momentum
- Pulling the bar behind the neck
- Cutting the stretch at the top

EASIER / HARDER

Band-Assisted Pull-Up or lighter weight / Pull-Ups or 3-sec lowering

SWAPS

Assisted Pull-Up, Single-Arm Cable Pulldown, Pull-Ups

Negative Pull-Up

Upper · Lats, biceps, mid-back (eccentric strength) · Equipment: Pull-up bar, box or bench

SETUP

1. Place a box under the bar so you can stand with your chin already above the bar.
2. Grab the bar slightly wider than your shoulders, palms facing away.

EXECUTION

1. Jump or step up so your chin is over the bar, elbows tight to your sides.
2. Lift your feet and hold the top for 1 second.
3. Lower yourself as SLOWLY as you can, counting the seconds in the program.
4. Fight the whole way down to straight arms, then step back on the box. That's one rep.

CUES

- Count out loud: one-Mississippi...
- Fight gravity the entire way
- Squeeze your shoulder blades down as you pass the middle

COMMON MISTAKES

- Dropping through the bottom half
- Doing too many reps so they become fast and sloppy
- Jumping too hard and hitting your chin

EASIER / HARDER

Shorter lowering (3 sec) or band-assisted negatives / Longer lowering (8–10 sec) or pause at three heights on the way down

SWAPS

Slow-lowering Lat Pulldown

Scapular Pull-Up

Upper · Lower traps, lats (scapular depression) · Equipment: Pull-up bar (or assisted machine)

SETUP

1. Hang from the bar with straight arms, hands slightly wider than your shoulders.
2. Let your shoulders rise toward your ears in a full stretch.

EXECUTION

1. Keeping your arms straight, pull your shoulders DOWN and slightly back. Your body rises 1–2 inches.
2. Hold for 2 seconds and feel the muscles under your armpits and between your shoulder blades.
3. Slowly let your shoulders rise back up to the stretch.

CUES

- Straight arms the whole time
- Shoulders away from your ears
- Tiny movement, big squeeze

COMMON MISTAKES

- Bending the elbows (that's a pull-up, not a scap pull)
- Rushing the reps
- Swinging

EASIER / HARDER

Do them on the assisted pull-up machine or with your feet on the floor under a low bar / 3–5 sec hold at the top

SWAPS

Straight-Arm Pulldown

Seated Cable Row

Upper · Mid-back (rhomboids, traps), lats, rear delts · Equipment: Cable row station, V-handle

SETUP

1. Sit with feet on the platform and knees slightly bent.
2. Grab the handle and sit tall with a neutral spine.

EXECUTION

1. Pull the handle to your belly button while driving your elbows back.
2. Squeeze your shoulder blades together at the end of each rep.
3. Return slowly, letting your shoulders reach forward slightly for a stretch without rounding your lower back.

CUES

- Sit tall
- Elbows back, chest proud
- Squeeze a pencil between your shoulder blades

COMMON MISTAKES

- Rocking the torso back and forth
- Shrugging the shoulders up
- Rounding the lower back

EASIER / HARDER

Machine Row / Pause 2 sec at the squeeze

SWAPS

Chest-Supported Row, Single-Arm DB Row, Machine Row

Single-Arm DB Row

Upper · Lats, mid-back, rear delts · Equipment: Bench, dumbbell

SETUP

1. Place one knee and the same-side hand on a bench, back flat.
2. Hold a dumbbell in the other hand, arm hanging straight.

EXECUTION

1. Pull the dumbbell toward your hip, driving your elbow back.
2. Squeeze your back at the top.
3. Lower slowly to a full stretch.

CUES

- Pull to your hip, not your chest
- Flat back

COMMON MISTAKES

- Twisting the torso
- Pulling with the bicep

EASIER / HARDER

Chest-supported row / Pause at the top

SWAPS

Seated Cable Row

Straight-Arm Pulldown

Upper · Lats (isolated), long head of triceps, core · Equipment: Cable machine, straight bar or rope

SETUP

1. Set the cable at the highest position with a straight bar or rope.
2. Step back, hinge forward slightly and hold the bar with straight arms at eye level.

EXECUTION

1. Keeping your arms long, sweep the bar down in an arc to your thighs.
2. Squeeze your lats hard at the bottom for 1 second.
3. Let it rise slowly back to eye level.

CUES

- Arms are just hooks
- Push the bar to your pockets
- Feel it under your armpits

COMMON MISTAKES

- Bending the elbows into a pushdown
- Rocking your body
- Going too heavy to feel the lats

EASIER / HARDER

Lighter weight, shorter range / 2-sec squeeze at the bottom

SWAPS

Dumbbell Pullover, Scapular Pull-Up
