AN INTERACTIVE COURSE BY DIGIBYDK

THE CARTOON SERIES BLUEPRINT

The exact Claude Code workflow behind Derek's 30 Day Glow Up, plus the viral cartoon formats. No coding needed.

12 CHAPTERS
STEP BY STEP

COPY-PASTE PROMPTS

YOU'RE IN 🎉

CONGRATS!

You just unlocked the exact system I use to make Derek's 30 Day Glow Up.

People scroll past these episodes wondering how they're made. You're about to make your own.

YOUR GAME PLAN

1. **Set up Claude Code** with my exact install prompt (Chapter 1)
2. **Plan your series** and build your main character
3. **Make, post and grow** your first episode

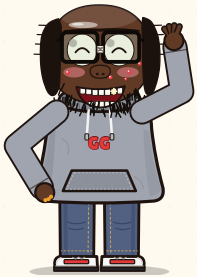

Your first episode is closer than you think. Turn the page. ▶

START HERE

WHAT YOU GET

Make a 2–3 minute animated story episode, start to finish, the way I make mine.

By the last page you'll have

- A series plan people come back for
- Characters that stay consistent
- A finished episode with voices, captions and a vote
- The viral cartoon formats, step by step
- Thumbnails, SEO tags and a posting plan

What you need

- A phone or computer
- **Claude Code** (by Anthropic) on a paid Claude plan. Chapter 1 sets it up.
- Your Instagram account

HOW THIS BOOK WORKS

This is the PDF edition. Write your answers in the boxes, then swap the [BRACKETS] in each prompt for your own details before you paste it into Claude Code. The digital edition fills the prompts in for you as you type.

It has to be Claude Code. Not every AI can make these. A normal chat app answers with text or a picture. Claude Code writes the code, runs it, and hands you back a finished video file. Every prompt and step in this book is built for it.

NO CODING NEEDED

NO CODING? GOOD.

I didn't know how to code when I started. You don't type code. You type normal sentences, and Claude Code does all the coding.

1. **Copy** a prompt from this book.
2. **Paste** it into Claude Code and hit enter.
3. **Look** at what it made.
4. **Tell it what to fix** in plain English, like texting a friend.

IF SOMETHING BREAKS

Copy the error message, paste it back to Claude Code and say "fix this." That's it. You never have to understand the error.

Stuck on a word? The next page explains every techy word in this book in plain English.

Real talk: the first episode feels slow because everything is new. By episode 3 you'll be giving notes like a director.

PLAIN ENGLISH

WORDS YOU'LL HEAR

PROMPT	The message you type to Claude Code. This book gives you all of them.
CLAUDE CODE	The AI that writes code AND runs it, then gives you real files.
SESSION	One conversation with Claude Code. Start a new one for each episode.
GITHUB / REPO	An online folder that saves your project between sessions. Free.
INSTALL	Claude Code downloads a tool it needs. You just say yes.
SKILL	Extra know-how you add to Claude, like a design guide.
MCP	A plug-in that gives Claude new tools.
CLAUDE.MD	A notes file Claude reads every time, so it remembers your rules.
RENDER	Turning the scenes into the actual video. Takes a few minutes.
FRAMES / FPS	A video is pictures in a row. 30 fps = 30 pictures per second.
TEST SHEET	One picture from every scene, so you can check before rendering.
TTS	Text-to-speech: the computer voices for your characters.
HEX COLOR	A color code like #ff4f7b, so colors match exactly.
1080×1920	The size of a vertical Reel or TikTok.

THE ROADMAP

12 CHAPTERS, IN ORDER

01	**Set Up** Install the studio, my add-ons, the code behind it
02	**Plan** Character, premise, twist, cast, CLAUDE.md
03	**Characters** Inspiration, the spec, real prompts, approving
04	**Write** Beat sheet, the vote, narration, dialogue, timing
05	**Make the Video** Sets, the episode prompt, notes, pro moves, render
06	**Sound** Voices, levels, sound effects, music
07	**Thumbnails** The formula, headlines, the grid crop
08	**Your Page** Name field, bio builder, highlights, pins
09	**Post It** Best time, caption builder, first-hour routine
10	**Grow** Comments, spin-offs, Insights, weekly plan
11	**Viral Formats** Text stories, fruit + pet drama, POV, glow-ups and more
12	**Toolkit** Every prompt plus both checklists

CHAPTER 01

01

Set up Claude Code

In this chapter

1. Get Claude Code
2. Install the studio
3. What gets installed
4. My design add-ons
5. Save your project
6. How it works
7. The code, explained

STEP 1 OF 7

Get Claude Code

Claude Code is Anthropic's AI that doesn't just chat. It writes code, runs it on a computer and hands you back real files, like your finished MP4.

Where to use it

- **Web:** claude.ai/code. Nothing to install, it runs in the cloud.
- **Claude desktop app**
- **Terminal** on your own computer

You need a **paid Claude plan** (Pro or Max).

BEFORE YOUR FIRST SESSION

The web version works with a GitHub repository. Make a free GitHub account and an empty repository, for example **my-cartoon-series**, then pick it when you start a session.

Heads up: on the web, each session runs on a temporary cloud computer. Download your videos as soon as they're done, and save your project to GitHub (Step 5) so the next session can pick it up.

STEP 2 OF 7

Install the studio

Run this first, in your very first session, before any characters. It installs everything the episodes need and tests it.

PROMPT 1 · INSTALL THE STUDIO

Set up an animation studio in this project for a vertical cartoon series. Go step by step and tell me when each part works.
1) Check for Python 3, Node.js and ffmpeg. Install anything missing.
2) Install Playwright with a headless Chromium browser. We'll use it to draw every frame.
3) Install the Python packages numpy, soundfile and Pillow.
4) Install Kokoro text-to-speech (the kokoro-onnx package) and download its model files kokoro-v1.0.onnx and voices-v1.0.bin into a tts/ folder. Make one test line in 3 different voices and list every voice name.
5) Download the Google Fonts Luckiest Guy, Lilita One and Nunito into fonts/.
6) Make these folders: rig/ (characters), sets/ (backgrounds), episodes/ (one folder per episode), refs/ (my reference images), out/ (finished videos).
7) Build the render pipeline: scenes are drawn as SVG by JavaScript as a function of time, Playwright screenshots every frame at 1080×1920 and 30 fps, and ffmpeg joins the frames and audio into an MP4 (H.264, yuv420p, AAC 48 kHz, +faststart).
8) Prove it works: render a 3-second test clip of a bouncing circle with one voice line and give me the MP4.
If anything is blocked (like a download), tell me exactly what, so I can allow it. Don't start any characters yet.

Wait until it sends you the test clip. If it says something is blocked, allow that site in your environment's network settings and start a new session.

STEP 3 OF 7

WHAT GETS INSTALLED

You don't type any commands. Claude Code installs all of this from the prompt on the last page.

PLAYWRIGHT + CHROMIUM	A hidden web browser. It draws every frame of your episode, 30 times per second.
FFMPEG	Joins all the frames and the sound into one MP4.
KOKORO TTS	Free voices that run on the computer (kokoro-onnx, plus the model files kokoro-v1.0.onnx and voices-v1.0.bin). Dozens of voices to cast your characters.
PYTHON + NUMPY, SOUNDFILE, PILLOW	Mix the music, sound effects and voices, and handle images.
NODE.JS	Runs the render script.
GOOGLE FONTS	Luckiest Guy (titles), Lilita One (labels), Nunito (text). Same fonts every episode.

STEP 4 OF 7

MY DESIGN ADD-ONS

These are extra. You can make episodes without them, but I installed them for more design help.

UI UX Pro Max skill

Design know-how Claude uses for thumbnails, store graphics and pages: styles, color palettes, font pairings. Paste this into Claude Code:

```
Install this skill for Claude Code:
https://github.com/nextlevelbuilder/ui-ux-pro-max-skill
```

21st.dev Magic MCP

A connection that gives Claude ready-made design components. Get an API key at 21st.dev, then run this in Claude Code (swap in your key):

```
claude mcp add --transport http 21st \
  https://21st.dev/api/mcp \
  --header "x-api-key: YOUR_KEY"
```

YOUR API KEY IS A PASSWORD

Never put it in a post, a screenshot or a shared chat. If it leaks, delete it on the site and make a new one.

Skill = extra know-how Claude reads when it's useful. **MCP** = a connection that gives Claude new tools. On the web, an MCP can fail to connect if your network settings block that site. Allow the site, then start a new session.

STEP 5 OF 7

SAVE YOUR PROJECT

Your characters, sets and voices are files. Save them, or you'll rebuild Derek from zero next time.

PROMPT 2 · SAVE YOUR PROJECT

Save this project so nothing gets lost between sessions. Use my GitHub repository [REPO NAME].
Commit after every approved step (character approved, set built, episode rendered) with a short message. Add the frames/ folders and big video files to .gitignore. I'll download the finished MP4s myself.
At the start of every new session, pull the latest version and read CLAUDE.md before doing anything.

- [ ] Download every finished MP4 and thumbnail right away
- [ ] Commit after each approved step
- [ ] Start every session with "pull the latest and read CLAUDE.md"

STEP 6 OF 7

HOW IT WORKS

Every episode goes through this pipeline. Claude Code builds and runs it. You direct.

1 SCRIPT	**segments.json**: every scene, its lines and its captions
2 VOICES	**voice.py** makes each line with Kokoro and saves the exact timing
3 SCENES	**scenes.js**: each scene is a function that draws the picture for any moment
4 FRAMES	**render.js** opens hidden Chromium and screenshots 30 frames every second
5 SOUND	**audio.py** mixes music and sound effects under the voice
6 ENCODE	**ffmpeg** joins the frames and the sound into the MP4

Why test sheets matter: a 3-minute episode is 5,400 frames. A full render takes a while, so you check one frame per scene first.

STEP 7 OF 7

The code, explained

You won't type this. Claude Code writes and runs it. Knowing the shape helps you ask for the right fix.

```
// rig/derek.js: a character is a function
function derek({x, y, size, pose, mouth, t}) {
  return `<g transform="translate(${x},${y})">`
    + body(pose) + head({mouth, blink: t})
    + `</g>`;
}

// episodes/ep06/scenes.js: a scene = time in, picture out
SCENES.waiting = (t) =>
  waitingRoom(t) +
  derek({x: 350, y: 870, pose: 'sit', t});
```

Characters and scenes are code, so they can move, blink and talk. That's why a pasted picture never looks this good.

```
// render.js: screenshot 30 frames for every second
for (let f = 0; f < totalFrames; f++) {
  await page.evaluate(t => draw(t), f / 30);
  await page.screenshot({ path: `frames/f${f}.jpg` });
}
```

```
ffmpeg -framerate 30 -i frames/f%05d.jpg -i mix.wav \
  -c:v libx264 -crf 16 -pix_fmt yuv420p \
  -c:a aac -ar 48000 -movflags +faststart ep06.mp4
```

Frames plus sound become your MP4. "Re-render scenes 12–15" just reruns this for those frames.

CHAPTER 02

02

PLAN YOUR SERIES

In this chapter

1. Main character
2. One-sentence premise
3. Twist + cast
4. HUD + handle
5. Save your rules

STEP 1 OF 5

PICK YOUR MAIN CHARACTER

Your series is one person with a **visible flaw**, a **goal** and a **deadline**.

Name

Derek

Age

20

Look (body, hair, outfit, signature items)

round, balding, giant glasses, gray GG hoodie, headphones

The flaw people can SEE

balding, yellow teeth

Goal

glow up for his date with Bella

Deadline

Day 30

Mine: Derek, 20. Balding gamer with yellow teeth. Goal: glow up for his date with Bella. Deadline: Day 30. People root for him and roast him. Both bring comments.

STEP 2 OF 5

Write your premise in one sentence

If you can't say it in one sentence, it's too complicated.

FORMULA

A [flaw] [who] has [deadline] to [goal], and YOU decide what happens.

Your premise

A broke, balding gamer has 30 days to glow up for a date, and you decide everything he does.

Series title

Derek's 30 Day Glow Up

Why it works: it names the character, the clock and the game (you vote) in one line. That line goes in your bio, your prompts and your recaps.

STEP 3 OF 5

ADD A TWIST AND A CAST

A secret the audience finds out later, plus 3 side characters with **one job and one trait** each.

The secret twist

Bella only said yes on a dare. She plans to humiliate him at a frat party.

Side characters (name: job + trait)

Dr. Molar: dentist who asks no questions
The Raccoon: shady guy who can get anything
Mom: the one he hides everything from

Tip: give the twist character their own spin-off later. Bella got "Bella's Side" after people kept commenting about her.

STEP 4 OF 5

PICK YOUR HUD AND HANDLE

The HUD is the bar at the top of every episode. It makes your series recognizable in one glance.

HUD

DAYS LEFT • GLOW-UP % • BELLA %

Your watermark / handle

@DigiByDK

DONE? COPY YOUR SERIES BIBLE

This is everything from this chapter in one block. Keep it in your notes and paste it at the top of every new Claude Code session.

Example:
SERIES: Derek's 30 Day Glow Up
PREMISE: A broke, balding gamer has 30 days to glow up for a date, and you decide everything he does.
MAIN CHARACTER: Derek, 20
LOOK: round, balding, giant glasses, gray GG hoodie, headphones
VISIBLE FLAW: balding, yellow teeth
GOAL: glow up for his date with Bella
DEADLINE: Day 30

STEP 5 OF 5

Save your rules in CLAUDE.md

Claude Code reads a file called CLAUDE.md at the start of every session. Put your series rules in it once, and it remembers your style forever.

PROMPT 3 · YOUR RULES (CLAUDE.md)

Create a CLAUDE.md file in this project so every future session follows my series rules. Put this in it:
SERIES: [TITLE]
PREMISE: [ONE-SENTENCE PREMISE]
MAIN CHARACTER: [NAME, AGE, LOOK]. Visible flaw: [VISIBLE FLAW].
SECRET TWIST (never reveal early): [SECRET TWIST]
SIDE CHARACTERS:
[SIDE CHARACTERS]
ON SCREEN: HUD [DAYS LEFT / METERS] at the top, watermark [@HANDLE].
STYLE: thick dark outlines, flat colors with one shadow and one highlight, big expressive eyes. Every character uses the same art style. Characters always fully in frame with consistent sizes.
EPISODES: under 3:00, 1080×1920, 30 fps. Open with a "Previously on" recap, end with a vote card and an unlock card. Captions 2–5 words, one highlighted word, inside the safe zone. Narrator louder than the music and never sped up.
WORKFLOW: test sheet before every full render. Never change an approved character unless I ask. When I give notes, change only what I asked and keep everything else the same. Back up files before big changes.

Your answers from this chapter are already filled in (blue). Run this right after the install prompt.

CHAPTER 03

03

Create your characters

In this chapter

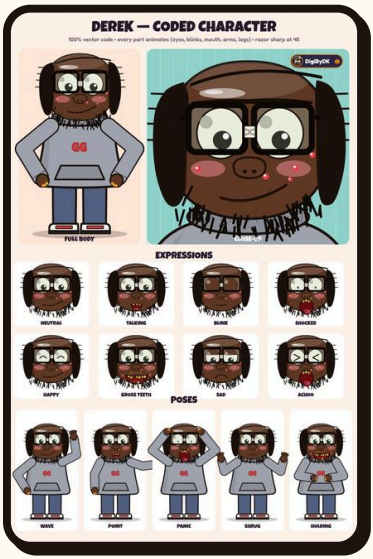

1. Design rules
2. Gather inspiration
3. Write the spec
4. Build it
5. A real example
6. Approve the sheet
7. Side characters

STEP 1 OF 7

Design Rules

1. **Silhouette test.** Recognizable from the shape alone.
2. **2–3 signature items** that never change (glasses, hoodie, headphones).
3. **A flaw you can see.** It drives the story.
4. **4–6 colors** and one outline thickness for everything.
5. **7 expressions:** happy, shocked, sad, angry, suspicious, smug, crying.

Derek's character sheet

RULE #1

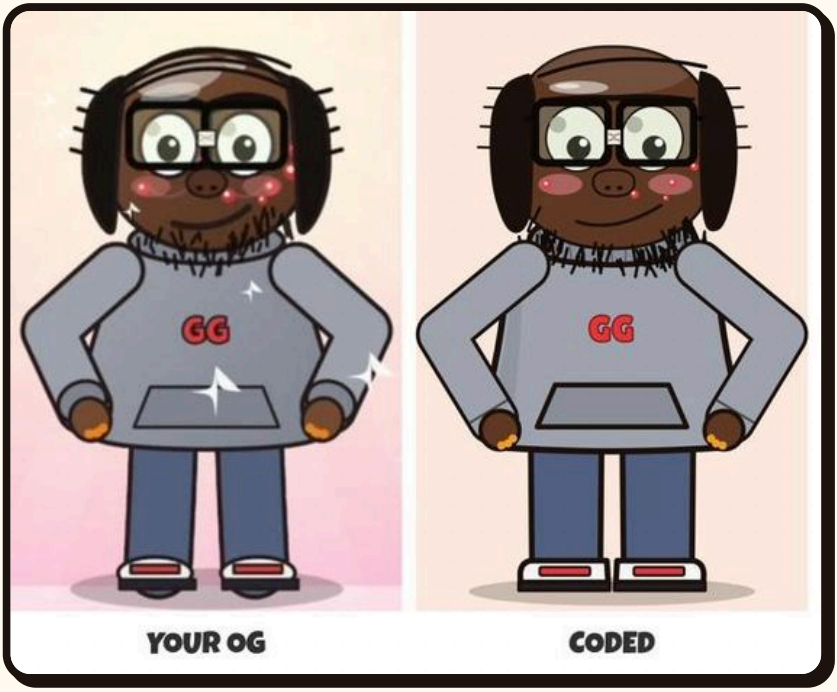

Make the character sheet before any episode. Don't move on until it looks exactly right.

STEP 2 OF 7

GATHER YOUR INSPIRATION

Claude Code copies what it can SEE much better than what you describe. Attach 3–5 images to your message (drag them in or use the paperclip).

- **2–3 images of the art style** you want: your own drawings, your old videos, or a style you love
- **A close-up of the face.** Eyes, nose and mouth are what people recognize.
- **A full-body shot** for proportions

How I got Derek right: my original next to the coded version, fixed until they matched

Style, not stealing. Use other people's art for style only. Make your own original characters.

STEP 3 OF 7

WRITE THE CHARACTER SPEC

The more exact you are, the closer the first try gets. Fill in every line.

Body

short and heavy, round belly

Skin color

deep brown #613a26

Head shape + size

big, wide and round, about 40% of his height

Eyes

big white eyes, small pupils, giant square glasses

Mouth + teeth

crooked yellow buck teeth with a gap

Hair

bald on top, two dark flaps on the sides

Outfit + colors

gray hoodie with a red GG logo, blue jeans, white sneakers

Signature items (always on)

square glasses, GG hoodie, headphones

Exact colors: ask Claude Code to "pick the hex colors from my reference images" and paste them here.

STEP 4 OF 7

BUILD IT

Attach your reference images, then paste this. Your spec is filled in (blue).

PROMPT 4 · BUILD THE MAIN CHARACTER

I attached [NUMBER] reference images. Use them for STYLE: outline thickness, eye style, head-to-body size and shading. [MAIN CHARACTER] is my own original character.
Build [MAIN CHARACTER] as a reusable character rig in rig/[MAIN CHARACTER].js, drawn 100% in code as SVG (no tracing, no pasted pictures). Split it into parts that can animate: head, eyes (pupils that move, eyelids that blink), eyebrows, mouth, torso, arms with elbow joints, hands, legs, shoes.
CHARACTER SPEC
• Body: [BODY]
• Head: [HEAD SHAPE + SIZE]
• Eyes: [EYES]
• Mouth & teeth: [MOUTH + TEETH]
• Hair: [HAIR]
• Skin: [SKIN COLOR]
• Outfit: [OUTFIT + COLORS]
• Always wearing: [SIGNATURE ITEMS]
• Visible flaw (the story depends on it): [VISIBLE FLAW]
STYLE: one outline thickness on everything (dark brown-black, not pure black), flat colors with one shadow and one highlight per shape, rounded friendly shapes.
MAKE: 7 expressions (happy, shocked, sad, angry, suspicious, smug, crying), 6 mouths (closed, 3 talking sizes for lip sync, shocked, grin), 8 poses (standing, hands on hips, pointing, waving, shrug, running, holding with both hands, arms up).
SHOW ME a high-res character sheet, plus my reference and your version side by side. List every difference you see and fix it before you show me.

STEP 5 OF 7

A real example

This is the level of detail that got Derek right. Short prompts like "make a bald cartoon guy" get random results.

REAL EXAMPLE · HOW I PROMPTED DEREK

I attached 3 reference images: two screenshots of my old Derek videos and a close-up of his face. Match them exactly. This is my own character and he has to look the same in every episode.
Build Derek as a reusable character rig in rig/derek.js, drawn 100% in code as SVG, split into parts that can animate (head, eyes with moving pupils and blinking lids, brows, mouth, torso, arms with elbow joints, hands, legs, shoes).
• Body: short and heavy, round belly, short legs, big sneakers
• Head: big, wide and round (a soft square), a bit flat on top, about 40% of his height
• Eyes: big white eyes with small dark pupils behind giant square black glasses
• Mouth & teeth: crooked yellow buck teeth with a gap. Also make a clean white veneer version.
• Hair: bald on top (it washed off in EP 2), two dark hair flaps on the sides
• Skin: deep brown #613a26, shadow #4a2818
• Outfit: gray hoodie #9fa4af with a red "GG" logo, blue jeans #526182, white sneakers with red stripes
• Always wearing: the glasses, the GG hoodie, headphones
Outline #1e130f on everything, one thickness. Flat colors, one shadow and one highlight per shape.
Make every expression, mouth and pose, then a 4K character sheet and a side-by-side with my reference. List the differences and fix them before you show me.

STEP 6 OF 7

APPROVE THE SHEET

Check every box before you say yes.

- [ ] Matches my reference (shape, eyes, outline weight)
- [ ] Head and body size feel right
- [ ] All poses look natural
- [ ] All expressions read instantly
- [ ] Signature items are on every pose
- [ ] Colors are the same everywhere

Not right? Say exactly what's wrong

✕ **"Make him look better."**

✓ **"His head is too small. Make it rounder and fatter, and the side hair shouldn't look boxy."**

WHEN IT'S RIGHT, LOCK IT

"This is approved. Don't change him unless I ask."

STEP 7 OF 7

Side characters, same style

PROMPT 5 · SIDE CHARACTER

Make a new character, [SIDE CHARACTER], in the EXACT same art style as [MAIN CHARACTER]. Reuse the head shape system, eyes, nose, outline thickness, shading and arm joints from rig/[MAIN CHARACTER].js so they clearly belong to the same cartoon. Save as rig/[SIDE CHARACTER].js.

- Role in the story: [ONE-LINE ROLE]
- Body type: [slim / average / huge] (make it obvious next to [MAIN CHARACTER])
- Look: [FACE, HAIR, SKIN, OUTFIT, ONE SIGNATURE ITEM]
- Personality in the face: [e.g. sleepy confident eyes / a nervous twitch]

Show a size check: [SIDE CHARACTER] and [MAIN CHARACTER] side by side at the same scale, both fully in frame. Then 4 expressions and 4 poses. Don't change [MAIN CHARACTER].

Side character name

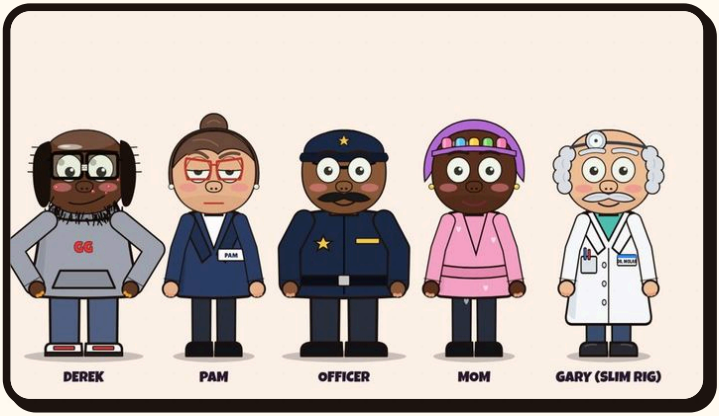

Dr. Molar

Body type

average

Their role

dentist who asks no questions

CHAPTER 04

04

WRITE THE EPISODE

In this chapter

1. The beat sheet
2. The vote
3. Narration
4. Dialogue
5. Format + time it
6. Real example

STEP 1 OF 5

Use the Beat Sheet

Every episode follows this shape.

0:00 0:07	**RECAP.** "Previously..." plus 3–4 quick shots and the last vote result. Never open with a confusing flash-forward.
0:07 0:30	**SETUP.** Where are we, what's the goal today, what's in the way.
0:30 1:30	**ESCALATION.** A new obstacle or joke every 5–10 seconds.
1:30 2:20	**THE TURN.** A new character or twist changes everything.
2:20 2:45	**THE DECISION.** Two options. Both cost something.
2:45 3:00	**VOTE + UNLOCK.** Vote card, then "EP X drops at ___ likes."

PACING

Stay under 3:00. Change something on screen every 2–3 seconds. If it's too long, cut a scene. Don't speed up the voice.

STEP 2 OF 5

MAKE THE VOTE HARD

FORMULA

Option A gets the goal faster but it's risky. Option B is safe but costs the goal.

Real votes from my series:

TEETH or HAIR | ROB A BANK or GET A JOB | RUN or SURRENDER | VENEERS or HIDE | BOTOX or LIPS

Your option A

VENEERS

Your option B

HIDE

This episode #

6

Unlock goal (likes)

3K

- **Plant both options earlier** in the episode so the vote feels earned.
- Put ✅ pros and ❌ cons on the card. End with "Comment ONE word."
- **Goal:** about 1.5–2× your usual likes. Missed it? Lower it next time.
- **Tie?** Spin a wheel at the start of the next episode.

STEP 3 OF 5

WRITE THE NARRATION

1. **One idea per line.** "He climbs the fence. His hoodie gets caught. Again."
2. **Rule of three.** "He looks up. And up. And up."
3. **Talk like you text a friend.** **"Y'all picked veneers. Of course you did."**
4. **Callbacks.** Bring old jokes back. The sock mask paid for his veneers.
5. **Leave a beat after punchlines.** Half a second lets people laugh.
6. **Clap back briefly.** A 5–10 second cold open answering a hater or copycat, then straight into the episode.

STEP 4 OF 5

Write Dialogue That Feels Real

Narration tells the story. Dialogue makes people believe it.

1. **Characters ask what a real person would ask.** "Why would you even help me?" "Is it safe over there?"
2. **Stay consistent with what happened.** Derek robbed a bank, so he's paranoid: cap low, sunglasses indoors, jogging at 4 AM.
3. **Give every character a way of talking.** Dr. Molar: dry and greedy. Mom: sweet until she smells something.
4. **Let side characters roast.** "That's not a tooth color, son. That's a refrigerator."

From EP6:

DEREK: Can I get the whitest one?
DR. MOLAR: That's not a tooth color, son. That's a refrigerator.
DEREK: Okay... does it hurt?
DR. MOLAR: Not for me.

STEP 5 OF 5

Format it and time it

Paste your script. This counts the words and estimates the length at a relaxed pace (145 words a minute).

Your script

SCENE 1 — DENTIST CHAIR
NARRATOR: First, the numbing shot.
ON SCREEN: giant needle, heartbeat
NARRATOR: Derek sees the needle... and passes out.

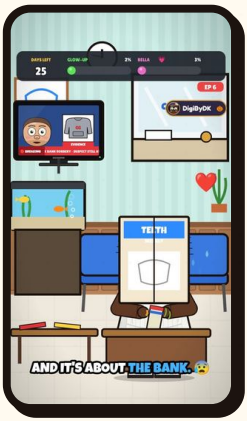

Format each line as SCENE • NARRATOR / CHARACTER • ON SCREEN • SFX. Claude Code then knows exactly what goes on screen.

REAL EXAMPLE

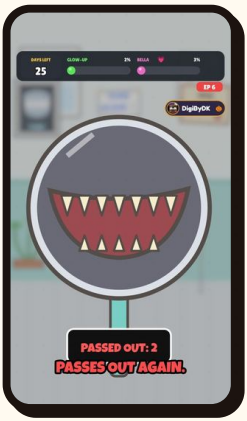

Episode 6, Broken Down

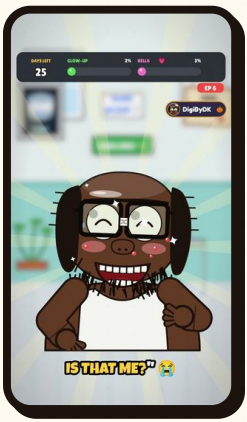

0:00 RECAP
tie → spin the wheel

0:07 SETUP
paranoid at the dentist

0:35 ESCALATION
passes out twice

0:46 THE WIN
"Yo, is that me?"

0:55 THE LOW
still hates the mirror

2:31 PRESSURE
cops on his street

It goes up and down: a win (the new teeth), a low (the mirror), then pressure (cops on his street) right before the vote. That rollercoaster keeps people watching to the end.

CHAPTER 05

05

MAKE THE VIDEO

In this chapter

1. Build your sets
2. Send the episode
3. Review the test sheet
4. Correct Claude
5. Give notes
6. High quality
7. Pro moves
8. Render + export
9. Save for next time

STEP 1 OF 9

BUILD YOUR SETS

Build the places your story happens once, then reuse them every episode.

PROMPT 6 · BACKGROUND SET

Build a reusable background set: [PLACE, e.g. the dentist's office]. Save it as sets/[name].js so every episode can reuse it.
Fill it with real detail, not an empty room: [6–10 PROPS, e.g. dental chair with a light arm, X-ray on a lightbox, framed diploma, a "FLOSS OR ELSE" poster, a plant, a tray of tools, a "CASH ONLY" sign].
Add depth: a textured back wall, a floor, shadows under objects, light coming from one direction, and a few small details people only notice on a second watch.
Use the same outline thickness and color style as my characters. Make a day and a night version, plus a blurred version for close-ups.
Show it to me with [MAIN CHARACTER] standing in it so I can check the scale.

My sets: Derek's bedroom, the bank, the dentist's office, the waiting room, the park at 4 AM, the kitchen. Most episodes reuse 3–4 of them.

STEP 2 OF 9

Send the episode

PROMPT 7 · BUILD THE EPISODE

Episode [#]. Here's the script as a scene list (lines, what's on screen, sound): [PASTE SCRIPT]
VOICES: text-to-speech for every line. Narrator: [VOICE], natural speed, 0.3–0.5 s pause between lines. Each character gets their own voice: [CHARACTER: VOICE]. Time every scene to its audio.
CAPTIONS: 2–5 words at a time, synced to the voice, one highlighted word, thick dark outline, inside the safe zone. Never over a face.
ON SCREEN: HUD [DAYS LEFT / METERS] at the top, watermark [@HANDLE]. Use my sets from sets/. Characters animate while they talk (mouth, hands, head, blinking). Slow camera push-in on every shot, fades between locations. Everyone fully in frame, sizes consistent.
STRUCTURE: open with a 7-second "Previously on" recap with the last vote result. End with a vote card ([OPTION A] vs [OPTION B], ✅ pro and ❌ con under each, "Comment ONE word") and an unlock card (EP [#] at [X] likes).
SOUND: narrator loudest, music low and ducked under speech, a sound effect on every beat.
LENGTH: under 3:00. If it runs long, tell me which scene to cut. Don't speed up the voices.
First send me a test sheet (one frame per scene in a grid) and the total length, then wait for my notes.

Paste your script where it says [PASTE SCRIPT]. Your vote, episode number and goal come from the Write chapter.

STEP 3 OF 9

Review the test sheet

A test sheet is one frame from every scene in a grid. Fixing things here is 10× faster than after a full render.

- [ ] Characters match the sheet
- [ ] Nobody cut off, sizes consistent
- [ ] Captions readable and not covering faces
- [ ] Backgrounds detailed, not empty
- [ ] A new viewer would understand it
- [ ] Under 3:00

STEP 4 OF 9

Don't be shy. Correct Claude.

It won't be perfect on the first try, and it doesn't get offended. My episodes look like this because I kept correcting it.

Real things I told it

"That looks nothing like my character. Copy him detail for detail."

"It looks like a pasted picture. Actually code it."

"His head is too small. Make it more round."

"Slow down. Everything's going too fast."

"The mom looks like a man. Make her smaller and add more detail."

"They don't go on a date until Day 30. Change that."

1. **Say what's wrong AND what you want instead.**
2. **One numbered note per problem.**
3. **Repeat until it's right.** Derek took several rounds.
4. **Lock what's approved** so fixes don't break it.

STEP 5 OF 9

Give notes THAT WORK

PROMPT 8 · NOTES ROUND

Notes on the test sheet:
1) [SCENE]: [what's wrong] → [exactly what I want]
2) [SCENE]: [what's wrong] → [exactly what I want]
Change only these. Keep everything else exactly the same. Re-render only the scenes that changed and show me the fixed frames before the full render.

REAL NOTES I SENT (EP 5-6)

Notes on the test sheet:
1) Park scenes: the coach gets cut off on the right edge. Keep both characters fully in frame, same sizes in every two-shot, and make the coach clearly taller.
2) The dentist feels rushed. Add the waiting room and the shade-picking conversation, and let every line breathe.
3) Derek's new teeth look blue. Make them natural bright white, normal size.
4) Mom looks like a man. Make her smaller and more feminine: lashes, glossy lips, hoop earrings, curly shoulder-length hair.
5) The intro is confusing. Replace the flash-forward with a "Previously on" recap.
Keep everything else exactly the same.

STEP 6 OF 9

MAKE IT LOOK HIGH QUALITY

Quality is detail and movement, not just resolution.

- **Real backgrounds:** furniture, posters, street lamps, lit windows
- **Characters move while they talk.** Still pictures look cheap.
- **A slow camera push-in** on every shot
- **Fades or flashes** when the location or time changes
- **Close-ups with a blurred background** for big lines
- **Continuity:** if his teeth got fixed, they're fixed in every shot after

ADD-ON · HIGH QUALITY

Make it look high quality: detailed backgrounds (furniture, posters, street details, lit windows), characters animated while talking, a slow camera push-in on every shot, fades or flashes between locations, blurred backgrounds behind close-ups, and continuity (anything that changed stays changed).

Pro moves

Say these to Claude Code to save hours.

FASTER	"Re-render only scenes 12–15."
CHECK	"Show me the frame at 1:22."
OVERVIEW	"Make a test sheet of every scene at the 70% point."
LENGTH	"What's the total length, and each scene's length?"
SAFETY	"Back up rig/derek.js before you change him."
PACING	"Slow the narrator 10% and re-time the captions."
MATCH	"Put my reference and your version side by side."
REUSE	"Use the same sets, voices and HUD as last episode."

STEP 8 OF 9

Render and export

Export settings
1080×1920 (9:16) • 30 fps • MP4 (H.264) • high bitrate • AAC audio, 48 kHz • under 3:00

Before you upload

- [ ] Watched it once with sound, start to finish
- [ ] Checked every caption for typos
- [ ] Vote card and unlock card are correct
- [ ] Turned on "Upload at highest quality" in the Instagram app (Settings → Data usage and media quality)
- [ ] Uploading the original file, not a copy sent through a chat app (those get compressed)

STEP 9 OF 9

Save it for next time

Your next episode should start where this one ended.

1. Download the final video and thumbnail.
2. Ask Claude Code to commit the project to GitHub.
3. Keep every script in one notes file.

PROMPT 11 · NEXT EPISODE

New session. Pull the latest project and read CLAUDE.md first. Continue the series with the same characters, sets, voices, HUD, caption style and thumbnail layout.
Last episode's vote result: [RESULT].
Recap moments to show at the start: [3–4 MOMENTS].
Here's Episode [#]: [PASTE SCRIPT]
Test sheet first, then wait for my notes.

CHAPTER 06

06

Sound

In this chapter

1. Voices and levels
2. Effects and music

STEP 1 OF 2

Voices and Levels

VOICE IS KING

If the sound effects drown out the narrator, people scroll. The narrator is always the loudest thing. Music sits way under it and drops further whenever someone talks.

1. **One voice per character.** Big characters deeper and slower, shady characters gravelly, the narrator clear and unhurried.
2. **Pauses are part of the sound.** Leave a beat after punchlines and before reveals.
3. **Test it twice:** once on your phone speaker, once with headphones. If you strain to hear a line, turn the voice up.

STEP 2 OF 2

Effects and music

A sound effect on every beat:

- whoosh: scene change
- pop: sticker
- thud / boing: falls
- heartbeat: tension
- siren: danger
- crickets: awkward
- record scratch: freeze
- cash register: money
- drumroll: reveal
- ding: good news

Music follows the mood

Bouncy for normal scenes, fast and tense for chases, soft piano for sad moments, silence right before the big reveal.

ADD-ON · SOUND

Sound: narrator loudest, music low and ducked under every line, a sound effect on every beat (whoosh on cuts, pop on stickers, thud on falls, heartbeat for tension, siren for danger, crickets for awkward silence), music that follows the mood (bouncy, tense for chases, soft piano for sad moments, silence before big reveals).

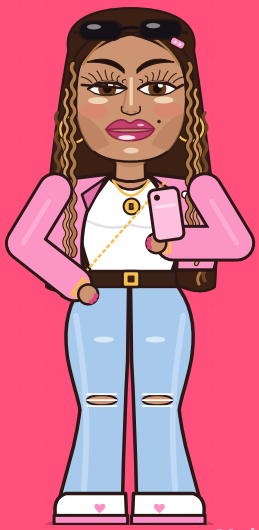

CHAPTER 07

07

THUMBNAILS PEOPLE CLICK

In this chapter

1. The formula
2. Headlines
3. Make it

STEP 1 OF 3

THE FORMULA

1. **One big face** with a strong emotion: shock, sweat, fear, smug.
2. **A 2-line headline:** a small setup line, then a huge punch line in a bright color.
3. **A conflict element:** the rival, cop lights, the money, a "MOGGED" sticker.
4. **The EP badge in the same spot** every time.
5. **Bright contrast** plus your watermark.

STEP 2 OF 3

WRITE THE HEADLINE

Remind voters that **they** did this. That's what makes them click.

Y'ALL MADE HIM ___ ROB A BANK

Y'ALL TOLD HIM ___ TO RUN

Y'ALL GAVE HIM ___ + sticker VENEERS + MOGGED

HE ___ FOR HER ROBBED A BANK

DAY __: ___ DAY 26: THE CHASE

- 2–6 words, all caps, one emoji max
- Same fonts and layout every episode
- Spin-offs get their own color (Bella's Side is pink)

STEP 3 OF 3

MAKE IT

PROMPT 9 · THUMBNAIL

Make the thumbnail for Episode [#] as a 1080×1920 PNG, in the same layout as my other thumbnails:
• Main image: [MAIN CHARACTER], big, chest up, [EMOTION, e.g. shocked and sweating], looking at [the rival / the money].
• Headline, 2 lines, top third: small white line "[SMALL LINE]", big yellow line "[BIG LINE]", thick dark outline, slightly tilted.
• Conflict element: [the rival behind him / cop lights / cash / a sticker like "MOGGED 💀"].
• EP [#] badge in the same spot as always, plus my watermark [@HANDLE].
• Background from the episode, darkened or blurred so the face pops.
Keep the face and the headline in the middle of the image so the profile grid crop doesn't cut them. Show me 2 options.

THE GRID CROP

Your profile grid shows a taller crop of the **middle** of the cover. Keep the face and the title in the center or they get cut off.

Upload it as the Reel's cover when you post. Don't use a random frame from the video.

CHAPTER 08

08

Set up your page

In this chapter

1. Name + picture
2. Bio builder
3. Highlights + pins

STEP 1 OF 3

Name field and picture

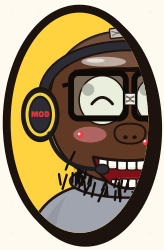

The name field is searchable. Put a keyword in it.

DigiByDK | Cartoon Series

People search "cartoon series" and "animation". Let them find you.

Profile picture

Your main character's face, close-up, on a bright background. It works as your logo.

Same face as your thumbnails so people connect the profile, the grid and the Reels instantly.

STEP 2 OF 3

BUILD YOUR BIO

Three lines, 150 characters max.

Line 1: what you make

🎬 Cartoon series where YOU decide

Line 2: the hook

Derek has 30 days to glow up for Bella 💀

Line 3: call to action

New eps weekly 👇

Example:
🎬 Cartoon series where YOU decide
Derek has 30 days to glow up for Bella 💀
New eps weekly 👇

91 / 150

STEP 3 OF 3

HIGHLIGHTS AND PINS

Story highlights

START HERE | EPISODES | CHARACTERS | VOTES | HOW I MAKE IT

START HERE holds the premise and EP1. **VOTES** holds the poll results; people love seeing their side win.

Pin 3 posts

1. **EP 1** so new people start at the beginning
2. **Your best-performing episode**
3. **Your newest episode**

- [ ] Keyword in the name field
- [ ] Bio has all 3 lines plus a link
- [ ] Profile picture is my main character
- [ ] Highlights set up
- [ ] 3 posts pinned

CHAPTER 09

09

POST IT RIGHT

In this chapter

1. Pick the time
2. Caption builder
3. Hashtags, pin, poll
4. The first hour
5. SEO: get found
6. What to post every week

STEP 1 OF 6

Pick the time

FIND YOUR PEAK

Instagram → your profile → Insights → Total followers → Most active times. Post 30–60 minutes before the busiest hour.

My audience's busiest hour

7:00 PM

Post between 6:00 PM and 6:30 PM

- **No data yet?** Weekdays 6–8 PM your audience's time.
- **Mostly students?** 30–60 min before school lets out, or the evening.
- **How often:** 2–4 episodes a week, consistently. "Double upload" days turn posts into events.

STEP 2 OF 6

BUILD YOUR CAPTION

Hook line (what happened + emoji)

DAY 25: the poll was 50/50, so we spun the wheel 🎡

Craziest moments (1-2 short lines)

Derek got the veneers. Passed out TWICE 😵

DAY 25: the poll was 50/50, so we spun the wheel 🎡
Derek got the veneers. Passed out TWICE 😵
[OPTION A] or [OPTION B]? Comment ONE word 👇
EP [#] drops at [X] likes ❤️

The vote, episode number and goal come from the Write chapter.

STEP 3 OF 6

HASHTAGS, PINNED COMMENT, POLL

Hashtags

3–5 relevant ones. Instagram caps posts at 5.

#animation #storytime #cartoon #glowup #yourname

Pinned comment

[OPTION A] or [OPTION B]? Most comments decides Episode [#] 😤

Poll sticker

Add a poll sticker to the Reel with your two options for people who won't comment. In Stories you can add extra options like "Both" or "Neither".

STEP 4 OF 6

THE FIRST HOUR

Don't post and disappear. The first hour decides how far it goes.

- [ ] Pin my comment the second it's live
- [ ] Reply to every comment I can for 30–60 minutes
- [ ] Share it to my Story with a poll sticker 15–30 minutes later
- [ ] Post a teaser between episodes (deleted scene, character intro, "the cops are getting closer...")

STEP 5 OF 6

SEO: Get Found

Instagram and TikTok search read your words. Put the right ones everywhere.

1. **Name field:** add a keyword. "DigiByDK | Cartoon Series"
2. **First line of the caption:** 2–3 keywords people search, like *animated story, cartoon series, storytime*.
3. **Say it and show it:** keywords in the cover text and spoken in the episode. Turn auto captions on.
4. **3–5 hashtags:** 1 broad, 2–3 niche, 1 your own. Rotate the sets.

Copy-paste tag sets

Story series: #animation #animatedseries #storytime #cartoon #yourname

Fruit / pet drama: #fruitdrama #petdrama #animation #funny #yourname

Text story: #textstory #storytime #chatstory #animation #yourname

Glow-up: #glowup #transformation #cartoon #animation #yourname

Swap **#yourname** for your own tag so people can binge every episode.

STEP 6 OF 6

WHAT TO POST EVERY WEEK

Episodes are the main event. These keep people coming back in between.

EPISODES	2–3 a week, same days, 30–60 min before your peak hour
TEASER	The best 5–10 seconds of the next episode in your Story
POLL	Story poll with this episode's vote
BEHIND THE SCENES	The character sheet, a test sheet, "Claude's first try vs final"
CHARACTER INTRO	15 seconds meeting a new character before they show up
RECAP	"The story so far" Reel for new followers
TIKTOK	Post every episode there too, same day

Tip: "Claude's first try vs my final" posts get people asking how you do it. That's how my DMs filled up.

CHAPTER 10

10

GROW THE SERIES

In this chapter

1. Use your comments
2. Read your numbers

STEP 1 OF 2

Use your comments

1. **Treat comments like a writers' room.** People told me they couldn't stand Bella, so she got her own spin-off.
2. **Spin-offs double your content** from the same world: a side character's side of the story.
3. **Recap at the start of every episode.** New viewers arrive mid-story.
4. **Haters and copycats:** one short clap-back as a cold open, then move on.
5. **Be recognizable:** same characters, HUD, caption style and thumbnail layout every time.

STEP 2 OF 2

Read your numbers

FIRST 3 SEC	Lots of people leaving? Fix the opener: recap faster, a bigger first image.
WATCH TIME	A drop in the middle means a slow scene. Cut it next time.
SHARES	Shares bring new viewers. Note which moments get shared and make more of them.
COMMENTS	Your vote count. Low? Make the choice harder and say "Comment ONE word."

Weekly plan

MON	Read votes and comments • write the script
TUE	Test sheet → notes → render
WED	**Post** • first-hour routine
THU–FRI	Teasers • next script • **post again**
WKND	Check Insights • plan the next twist

CHAPTER 11

11

VIRAL CARTOON FORMATS

In this chapter

1. What Claude Code can make
2. Text message stories
3. POV storytime
4. If ___ were people
5. Fruit drama
6. Pet drama
7. Would you rather
8. Absurd meme characters
9. Glow-ups
10. Lip-sync

NOT JUST MY STYLE

MAKE WHAT'S GOING VIRAL

My series is one style. These cartoon formats blow up on Instagram and TikTok over and over, and Claude Code can build every one of them in YOUR art style.

✅ **Claude Code can make**

- 2D cartoons in any style, built in code
- Voices, captions, sound effects and music
- Text stories, skits, dramas, quizzes, loops

❌ **Not this tool**

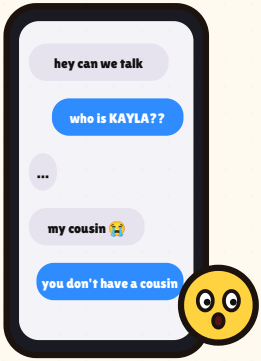

- Photoreal or 3D "Pixar-look" AI videos. Those come from AI video generators, a different kind of tool.
- Copyrighted characters or songs. Make originals, and add trending sounds in the Instagram or TikTok app.

PICK ONE

Choose one format and post it 5 times before you judge it. Every format on the next pages comes with a ready prompt.

FORMAT 1 OF 9

Text message stories

Why it goes viral: A juicy chat with a twist. People pause to read every message, and watch time goes up.

- Twist in the last message
- Cliffhanger = "Part 2" comments

PROMPT · TEXT MESSAGE STORY

Make a text message story video, 1080×1920, 30 fps, under 60 seconds.
Show a phone screen (iMessage style) where messages pop in one by one between [PERSON A] and [PERSON B].
Story: [1–2 SENTENCES, WITH A TWIST AT THE END].
Rules: a typing bubble before each message, a pop sound on every message, the chat scrolls up as messages stack, timestamps, "Read" under the awkward ones, and a zoom on the twist message. Put a cartoon reaction face in the corner that changes expression with the drama.
End on a cliffhanger text and a "Part 2?" card. Test sheet first.

HOOK / COVER TEXT: POV: you find his second phone 📱

TAGS: #textstory #chatstory #storytime #animation #yourname

FORMAT 2 OF 9

POV STORYTIME

Why it goes viral: One character tells a wild story to the camera. Feels personal, like a friend spilling tea.

- Cut to quick flashbacks
- End on a question

PROMPT · POV STORYTIME

Make a POV storytime cartoon. One character, [MAIN CHARACTER], talks straight to the camera and tells this story: [PASTE STORY].
Every few seconds, cut to a quick cartoon flashback of what they're describing, in the same art style. Big captions, a zoom on every punchline, a sound effect on every beat. Mouth synced to the voice, hands moving while they talk.
Under 90 seconds. End on a question for the comments: [QUESTION].

HOOK / COVER TEXT: POV: I told my mom the truth for once 😭

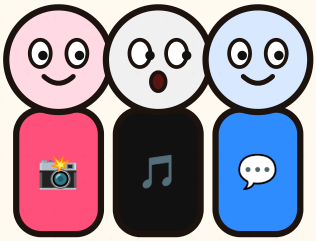

TAGS: #povstory #storytime #animation #cartoon #yourname

FORMAT 3 OF 9

IF _ WERE PEOPLE

Why it goes viral: Apps, countries, foods or organs as characters. Everyone relates, so everyone tags a friend.

- One trait per character
- Punchline every 5–10 sec

PROMPT · IF ___ WERE PEOPLE

Make an "If [THINGS, e.g. apps / countries / your organs] were people" cartoon. Design each one as a character in my art style, with a look that matches its personality (e.g. [THING]: [LOOK + PERSONALITY]).
Write 5–6 quick bits (5–10 seconds each) of them interacting, like a group chat or a party. Every bit ends on a punchline with a sound effect. Show a name tag the first time each one appears. Under 60 seconds.

HOOK / COVER TEXT: If apps were people at a party 🎉

TAGS: #ifappswerepeople #animation #funny #cartoon #yourname

FORMAT 4 OF 9

FRUIT DRAMA

Why it goes viral: Fruits in a soap opera: cheating, slaps, betrayal. Silly characters, serious drama.

- Overact everything
- Vote on the cliffhanger

PROMPT · FRUIT DRAMA

Make a fruit soap opera cartoon: fruits with faces, arms and legs, thick outlines, same style as my characters.
Cast: [e.g. Strawberry (main girl), Banana (the cheater), Pineapple (best friend)].
Story: [THE DRAMA, e.g. Banana gets caught texting Kiwi].
Set it on [a kitchen counter / inside the fridge / a fruit bowl at night]. Dramatic zooms, gasps, slow-motion slaps, dramatic music stings. End on a cliffhanger with a vote: [OPTION A] or [OPTION B].

HOOK / COVER TEXT: Banana got caught... 🍌😳

TAGS: #fruitdrama #animation #funny #storytime #yourname

FORMAT 5 OF 9

Pet Drama

Why it goes viral: Cats and dogs in human situations. Pet owners share it instantly.

- Inner-voice narration
- Zoom on the side-eye

PROMPT · PET DRAMA

Make a pet drama cartoon: [cats / dogs] acting out a human situation: [STORY, e.g. the cat finds out the dog ate her food and confronts him]. Cartoon animals with big expressive eyes and human gestures, same art style. Inner-voice narration for the main pet, dramatic music, zooms on every side-eye, and a twist ending. Under 60 seconds.

HOOK / COVER TEXT: When the dog eats the cat's food 😾

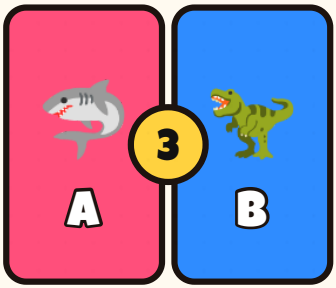

TAGS: #petdrama #catdrama #animation #funny #yourname

FORMAT 6 OF 9

WOULD YOU RATHER

Why it goes viral: Interactive: people answer in their head, then in the comments.

- Countdown before each answer
- Last question = impossible

PROMPT · WOULD YOU RATHER

Make an interactive "Would you rather" cartoon. [MAIN CHARACTER] faces 5 choices, one at a time: [CHOICE PAIRS].
For each: a split screen with both options illustrated, a 3-second countdown so viewers can pick, then [MAIN CHARACTER] picks and we see the funny consequence. End with "Comment your answers" and one last impossible question.

HOOK / COVER TEXT: Would you rather... (you can't skip) 😈

TAGS: #wouldyourather #quiz #animation #cartoon #yourname

FORMAT 7 OF 9

ABSURD meme CHARACTERS

Why it goes viral: Weird original mashups with a catchy chant. Short, loud and loopable.

- Keep it 20–30 seconds
- Loop back to the start

PROMPT · ABSURD MEME CHARACTERS

Create 3 ORIGINAL absurd meme characters: weird mashups like [an animal + an object, e.g. a shark in sneakers / a coffee cup with legs]. Give each one a catchy nonsense name and a chant-like voice line.
Make a 20–30 second video that loops: each character gets a dramatic entrance with a bass drop, a name card and their chant. Bright colors, fast cuts, and the ending loops cleanly back to the start.

HOOK / COVER TEXT: Meet the newest meme 🦈👟

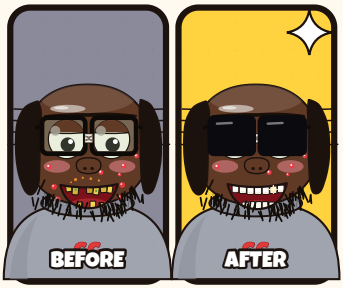

TAGS: #brainrot #memes #animation #funny #yourname

FORMAT 8 OF 9

GLOW-UPS

Why it goes viral: Before, montage, slow-mo after. A satisfying payoff people rewatch.

- Progress meter in the montage
- "Rate it 1–10" at the end

PROMPT · GLOW-UP

Make a glow-up transformation cartoon for [CHARACTER]. Start with the "before" (messy, sad), then a fast montage (gym, skincare, haircut, new outfit) with a progress meter filling up, then a slow-motion "after" reveal with sparkles and a beat drop.
End with a before/after split screen and "Rate the glow-up 1–10 👇".

HOOK / COVER TEXT: From a 2 to a 10 in 30 days ✨

TAGS: #glowup #transformation #animation #cartoon #yourname

FORMAT 9 OF 9

LIP-SYNC

Why it goes viral: Your character performs an audio clip with matching mouth and gestures.

- Use audio you own or recorded
- Add the trending sound in the app

PROMPT · LIP-SYNC

I uploaded an audio file: [FILE NAME]. Make [MAIN CHARACTER] lip-sync and act it out: match the mouth to every word, add gestures and facial expressions that fit the mood, and cut to quick cartoon visuals that match the lines. Make the video the exact length of the audio.

HOOK / COVER TEXT: He was NOT ready for this one 🎤

TAGS: #lipsync #animation #cartoon #funny #yourname

CHAPTER 12

12

YOUR TOOLKIT

In this chapter

1. All prompts
2. Episode checklist
3. Posting checklist

ALL PROMPTS

Set up: Prompt 1

PROMPT 1 · INSTALL THE STUDIO

Set up an animation studio in this project for a vertical cartoon series. Go step by step and tell me when each part works.
1) Check for Python 3, Node.js and ffmpeg. Install anything missing.
2) Install Playwright with a headless Chromium browser. We'll use it to draw every frame.
3) Install the Python packages numpy, soundfile and Pillow.
4) Install Kokoro text-to-speech (the kokoro-onnx package) and download its model files kokoro-v1.0.onnx and voices-v1.0.bin into a tts/ folder. Make one test line in 3 different voices and list every voice name.
5) Download the Google Fonts Luckiest Guy, Lilita One and Nunito into fonts/.
6) Make these folders: rig/ (characters), sets/ (backgrounds), episodes/ (one folder per episode), refs/ (my reference images), out/ (finished videos).
7) Build the render pipeline: scenes are drawn as SVG by JavaScript as a function of time, Playwright screenshots every frame at 1080×1920 and 30 fps, and ffmpeg joins the frames and audio into an MP4 (H.264, yuv420p, AAC 48 kHz, +faststart).
8) Prove it works: render a 3-second test clip of a bouncing circle with one voice line and give me the MP4.
If anything is blocked (like a download), tell me exactly what, so I can allow it. Don't start any characters yet.

ALL PROMPTS

SET UP: PROMPTS 2–3

PROMPT 2 · SAVE YOUR PROJECT

Save this project so nothing gets lost between sessions. Use my GitHub repository [REPO NAME].
Commit after every approved step (character approved, set built, episode rendered) with a short message. Add the frames/ folders and big video files to .gitignore. I'll download the finished MP4s myself.
At the start of every new session, pull the latest version and read CLAUDE.md before doing anything.

PROMPT 3 · YOUR RULES (CLAUDE.md)

Create a CLAUDE.md file in this project so every future session follows my series rules. Put this in it:
SERIES: [TITLE]
PREMISE: [ONE-SENTENCE PREMISE]
MAIN CHARACTER: [NAME, AGE, LOOK]. Visible flaw: [VISIBLE FLAW].
SECRET TWIST (never reveal early): [SECRET TWIST]
SIDE CHARACTERS:
[SIDE CHARACTERS]
ON SCREEN: HUD [DAYS LEFT / METERS] at the top, watermark [@HANDLE].
STYLE: thick dark outlines, flat colors with one shadow and one highlight, big expressive eyes. Every character uses the same art style. Characters always fully in frame with consistent sizes.
EPISODES: under 3:00, 1080×1920, 30 fps. Open with a "Previously on" recap, end with a vote card and an unlock card. Captions 2–5 words, one highlighted word, inside the safe zone. Narrator louder than the music and never sped up.
WORKFLOW: test sheet before every full render. Never change an approved character unless I ask. When I give notes, change only what I asked and keep everything else the same. Back up files before big changes.

ALL PROMPTS

CHARACTERS: PROMPT 4

PROMPT 4 · BUILD THE MAIN CHARACTER

I attached [NUMBER] reference images. Use them for STYLE: outline thickness, eye style, head-to-body size and shading. [MAIN CHARACTER] is my own original character.
Build [MAIN CHARACTER] as a reusable character rig in rig/[MAIN CHARACTER].js, drawn 100% in code as SVG (no tracing, no pasted pictures). Split it into parts that can animate: head, eyes (pupils that move, eyelids that blink), eyebrows, mouth, torso, arms with elbow joints, hands, legs, shoes.
CHARACTER SPEC
- Body: [BODY]
- Head: [HEAD SHAPE + SIZE]
- Eyes: [EYES]
- Mouth & teeth: [MOUTH + TEETH]
- Hair: [HAIR]
- Skin: [SKIN COLOR]
- Outfit: [OUTFIT + COLORS]
- Always wearing: [SIGNATURE ITEMS]
- Visible flaw (the story depends on it): [VISIBLE FLAW]

STYLE: one outline thickness on everything (dark brown-black, not pure black), flat colors with one shadow and one highlight per shape, rounded friendly shapes.
MAKE: 7 expressions (happy, shocked, sad, angry, suspicious, smug, crying), 6 mouths (closed, 3 talking sizes for lip sync, shocked, grin), 8 poses (standing, hands on hips, pointing, waving, shrug, running, holding with both hands, arms up).
SHOW ME a high-res character sheet, plus my reference and your version side by side. List every difference you see and fix it before you show me.

ALL PROMPTS

PROMPTS 5–6

PROMPT 5 · SIDE CHARACTER

Make a new character, [SIDE CHARACTER], in the EXACT same art style as [MAIN CHARACTER]. Reuse the head shape system, eyes, nose, outline thickness, shading and arm joints from rig/[MAIN CHARACTER].js so they clearly belong to the same cartoon. Save as rig/[SIDE CHARACTER].js.

- Role in the story: [ONE-LINE ROLE]
- Body type: [slim / average / huge] (make it obvious next to [MAIN CHARACTER])
- Look: [FACE, HAIR, SKIN, OUTFIT, ONE SIGNATURE ITEM]
- Personality in the face: [e.g. sleepy confident eyes / a nervous twitch]

Show a size check: [SIDE CHARACTER] and [MAIN CHARACTER] side by side at the same scale, both fully in frame. Then 4 expressions and 4 poses. Don't change [MAIN CHARACTER].

PROMPT 6 · BACKGROUND SET

Build a reusable background set: [PLACE, e.g. the dentist's office]. Save it as sets/[name].js so every episode can reuse it.

Fill it with real detail, not an empty room: [6–10 PROPS, e.g. dental chair with a light arm, X-ray on a lightbox, framed diploma, a "FLOSS OR ELSE" poster, a plant, a tray of tools, a "CASH ONLY" sign].

Add depth: a textured back wall, a floor, shadows under objects, light coming from one direction, and a few small details people only notice on a second watch.

Use the same outline thickness and color style as my characters. Make a day and a night version, plus a blurred version for close-ups.

Show it to me with [MAIN CHARACTER] standing in it so I can check the scale.

ALL PROMPTS

EPISODE: PROMPT 7

PROMPT 7 · BUILD THE EPISODE

Episode [#]. Here's the script as a scene list (lines, what's on screen, sound): [PASTE SCRIPT]
VOICES: text-to-speech for every line. Narrator: [VOICE], natural speed, 0.3–0.5 s pause between lines. Each character gets their own voice: [CHARACTER: VOICE]. Time every scene to its audio.
CAPTIONS: 2–5 words at a time, synced to the voice, one highlighted word, thick dark outline, inside the safe zone. Never over a face.
ON SCREEN: HUD [DAYS LEFT / METERS] at the top, watermark [@HANDLE]. Use my sets from sets/. Characters animate while they talk (mouth, hands, head, blinking). Slow camera push-in on every shot, fades between locations. Everyone fully in frame, sizes consistent.
STRUCTURE: open with a 7-second "Previously on" recap with the last vote result. End with a vote card ([OPTION A] vs [OPTION B], ✅ pro and ❌ con under each, "Comment ONE word") and an unlock card (EP [#] at [X] likes).
SOUND: narrator loudest, music low and ducked under speech, a sound effect on every beat.
LENGTH: under 3:00. If it runs long, tell me which scene to cut. Don't speed up the voices.
First send me a test sheet (one frame per scene in a grid) and the total length, then wait for my notes.

ALL PROMPTS

Notes + Quality

PROMPT 8 · NOTES ROUND

Notes on the test sheet:
1) [SCENE]: [what's wrong] → [exactly what I want]
2) [SCENE]: [what's wrong] → [exactly what I want]
Change only these. Keep everything else exactly the same. Re-render only the scenes that changed and show me the fixed frames before the full render.

ADD-ON · HIGH QUALITY

Make it look high quality: detailed backgrounds (furniture, posters, street details, lit windows), characters animated while talking, a slow camera push-in on every shot, fades or flashes between locations, blurred backgrounds behind close-ups, and continuity (anything that changed stays changed).

ADD-ON · SOUND

Sound: narrator loudest, music low and ducked under every line, a sound effect on every beat (whoosh on cuts, pop on stickers, thud on falls, heartbeat for tension, siren for danger, crickets for awkward silence), music that follows the mood (bouncy, tense for chases, soft piano for sad moments, silence before big reveals).

ALL PROMPTS

PROMPTS 9–11

PROMPT 9 · THUMBNAIL

Make the thumbnail for Episode [#] as a 1080×1920 PNG, in the same layout as my other thumbnails:
• Main image: [MAIN CHARACTER], big, chest up, [EMOTION, e.g. shocked and sweating], looking at [the rival / the money].
• Headline, 2 lines, top third: small white line "[SMALL LINE]", big yellow line "[BIG LINE]", thick dark outline, slightly tilted.
• Conflict element: [the rival behind him / cop lights / cash / a sticker like "MOGGED 💀"].
• EP [#] badge in the same spot as always, plus my watermark [@HANDLE].
• Background from the episode, darkened or blurred so the face pops.
Keep the face and the headline in the middle of the image so the profile grid crop doesn't cut them. Show me 2 options.

PROMPT 10 · POST PACK

Write my Instagram post for Episode [#]: a caption (hook line, 2 short lines with the craziest moments, "[OPTION A] or [OPTION B]? Comment ONE word 👇", "EP [#] drops at [X] likes"), 5 hashtags, a pinned comment and a poll sticker question.

PROMPT 11 · NEXT EPISODE

New session. Pull the latest project and read CLAUDE.md first. Continue the series with the same characters, sets, voices, HUD, caption style and thumbnail layout.
Last episode's vote result: [RESULT].
Recap moments to show at the start: [3–4 MOMENTS].
Here's Episode [#]: [PASTE SCRIPT]
Test sheet first, then wait for my notes.

CHECKLIST

Every episode

0 / 11 done

- [ ] Recap in the first 7 seconds, with the last vote result
- [ ] A new beat every 5–10 seconds
- [ ] 3+ dialogue moments with real questions
- [ ] One callback / running joke
- [ ] Both vote options planted earlier
- [ ] Characters match the sheet; nobody cut off
- [ ] Detailed backgrounds; characters move while talking
- [ ] Captions 2–5 words, one highlighted word, in the safe zone
- [ ] Narrator louder than music and effects
- [ ] Not rushed; pauses after punchlines
- [ ] 1080×1920, 30 fps, under 3:00

CHECKLIST

Every post

0 / 10 done

- [ ] Watched it with sound (speaker + headphones)
- [ ] Thumbnail: big face, 2-line headline, EP badge, centered
- [ ] Caption: hook, highlights, vote question, goal
- [ ] 3–5 hashtags
- [ ] Poll sticker added
- [ ] Upload at highest quality: ON
- [ ] Posting 30–60 min before my peak
- [ ] Pinned comment ready
- [ ] Free for the first hour
- [ ] Story share + teaser planned
